Dear LURC,

We are officially requesting a public hearing for the Bower Mt. Wind Project. These turbines will cause unreasonable economic effects in this beautiful lake region. They are a visual blight; they permanently change the ridges; they are currently only producing 18-30% of their projected capacity; the electricity will be shipped out of state; wind energy costs about 0.21 cents a kilowatt to produce; this will make electrical rates to go up; etc. Maine residents deserve to be heard and to make their case for and AGANIST these projects.

Thank You,

Rose M. Staton
