

BIG SQUAW POND  
T3 R5, Piscataquis Co.  
U. S. G. S. Greenville, Me.

Fishes

Brook trout (squaretail)

White sucker

Physical Characteristics

Area - 91 acres

Temperatures

Maximum depth - 96 feet

Surface - 66° F.

90 feet - 41° F.

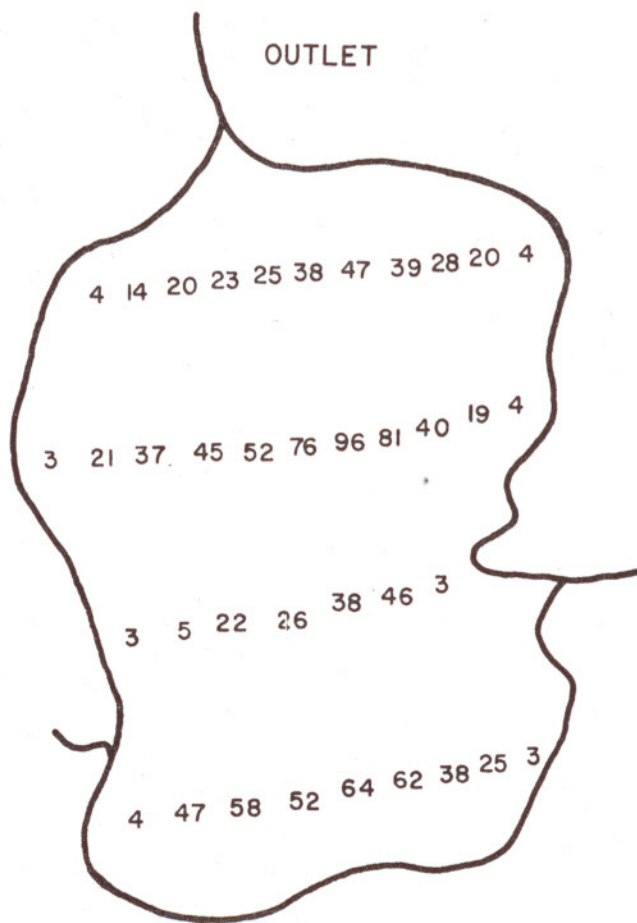

Suggested Management

Big Squaw Pond has very good water quality for cold-water game fishes and should be managed for brook trout.

The pond is used as a source of drinking water for the town of Greenville with the water supply intake located approximately one and one-half miles below the pond. Although the pond has been closed to all fishing for many years there is no justification for continuing this policy.

There is only one species of fish competing with the brook trout and care should be taken not to introduce others.

The pond should be opened to fishing under a five fish limit with no live fish used as bait.
