Rainbow smelt	American eel
Minnnows	
Blacknose dace	
Creek chub	

Physical Characteristics

Area - 538 acres

Maximum depth - 159 feet

Temperatures:

Surface - 66°F

110 feet - 40°F

Principal fisheries: Brook trout and lake trout

King and Bartlett Lake is located east of King and Bartlett Mountain. Two inlets enter at both ends of the east side of the lake. Its outlet flows south into nearby Little King Lake. The lake's shoreline is mostly undeveloped.

Water quality in King and Bartlett Lake is excellent for coldwater gamefish. Despite the lack of suitable spawning tributaries, a native population of brook trout utilizes the shore to maintain a fishery. Growth for salmonids is good with little competition for brook trout and adequate numbers of smelt for lake trout forage. The lake is not stocked.

King and Bartlett Lake is accessible via private gated roads east of Route 27. The lake is open to fishing with no live fish as bait in the summer and closed to fishing in the winter. See the lawbook for additional regulations.

Surveyed - July, 1953
