

MINK MARSH POND
T11 R10, Aroostook Co.
T10 R10, Piscataquis Co.
U.S.G.S. Mooseleuk Lake, Me.

Fishes

Brook trout (squaretail)	Minnows (cont'd)
White sucker	Creek chub
Minnows	Redbelly dace
Common shiner	Blacknose dace
Pearl dace	

Physical Characteristics

Area - 13 acres	Temperatures
	Surface - 63° F.
Maximum depth - 4 feet	4 feet - 63° F.

Most of Mink Marsh Pond is less than 3 feet deep with a soft mud bottom. The pond is surrounded by flat shores with typical bog vegetation. Water temperatures become warm during the summer, and trout move into the cool-water influence of inlet brooks.

Trout production is limited by both the small amount of cold water area and abundant populations of suckers and minnows.

The trout population is maintained by natural spawning in the inlet and migration from the outlet stream. An old sawmill dam at the outlet is passable to trout migration at most water levels.
