

## ROUND POND

Soldiertown (T2 R7 W.E.L.S.), Penobscot Co.  
U.S.G.S. Staceyville, Me.

### Fishes

Smallmouth bass	White sucker
Yellow perch	Minnows
Chain pickerel	Fallfish (chub)
Lake whitefish	Pumpkinseed sunfish

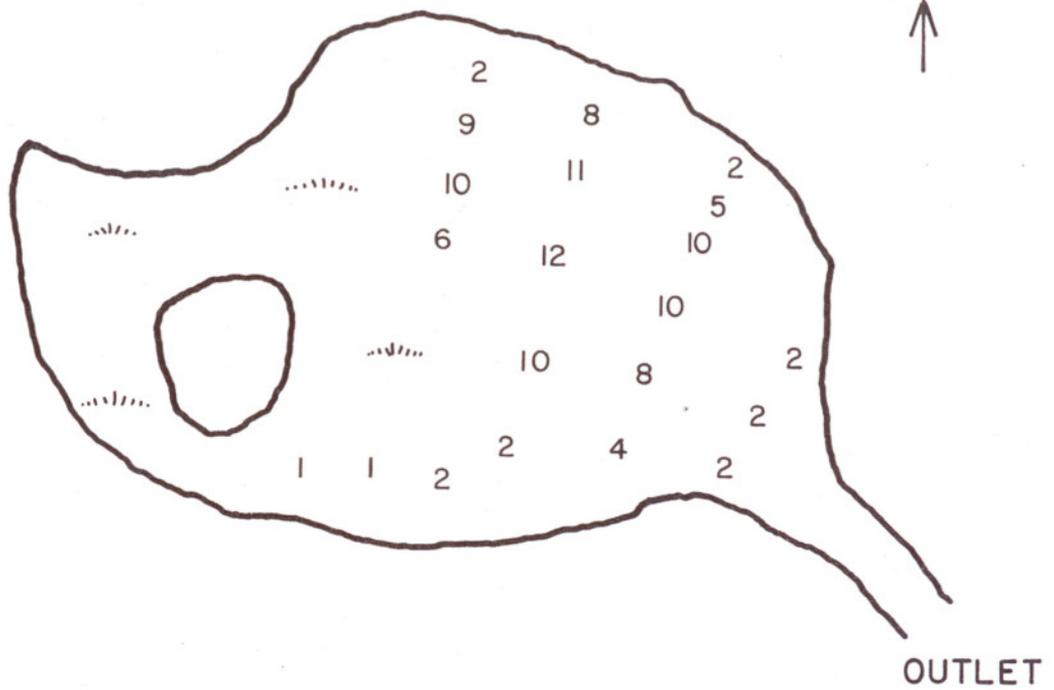

### Physical Characteristics

Area - 3 acres	Temperatures
	Surface - 72° F.
Maximum depth - 12 feet	12 feet - 51° F.

### Suggested Management

Round Pond is a small, spring-fed pond, suitable in water quality characteristics for brook trout. Sufficient quantities of dissolved oxygen are present in the cold waters to support a small trout population in the absence of competing species. The presence of large populations of warm-water fishes however, precludes management for trout unless chemical reclamation is considered. Hence, present management should be for the yellow perch and pickerel fisheries.

No stocking of any kind is recommended.
