Brook trout	Redbelly dace
Splake	Creek chub
Rainbow smelt	White sucker
Smallmouth bass	Banded killifish
White perch	Redbreast sunfish
Chain pickerel	

Physical Characteristics

Area - 213 acres

Maximum depth - 48 feet

Temperatures:

Surface - 75°F

40 feet - 46°F

Principal fisheries: Brown trout, splake, smallmouth bass, white perch, chain pickerel

Wentworth Pond is located southwest of Mulhern Hill. A number of small inlets enter all sides of the pond. Its outlet, the East Branch of Wesserunsett Stream, flows southeast until converging with the West Branch in Athens to form Wesserunsett Stream. The pond's shoreline is mostly developed.

Water quality in Wentworth Pond is marginal for coldwater gamefish. Competition from warmwater fish further limits the success of coldwater species. Spawning and nursery habitat is limited, so splake are stocked to maintain coldwater fisheries.

Wentworth Pond is accessible via a public hand-carry launch site at the north end of the west shore. A gravel camp road off the Solon Road reaches it. The pond is open to fishing under general law in both the summer and winter seasons. See the lawbook for additional regulations.

Surveyed - July, 1959

Resurveyed - 1990, 1996
