EXPLANATION

Rock Types

- Mag. Dike — Magnetic Dike – Thin basalt dikes, lamprophyres and monzonites – all with disseminated magnetite – magnetic in outcrop.
- peg — Pegmatite – potassium – feldspar rich pegmatite dikes.
- granite — Granite – quatz monzite – related to the Waldoboro granite pluton.
- pd — Peridotite – dikes or sheets of lherzolite – various stages of alteration.
- gb — Gabbro – various types of gabbros ; each outcrop discribed separately.
- BK — Bucksport – fine grained, often banded, plagioclase hornblende granulite – variations are discribed.
- CH — Clarry Hill Schist – medium grained banded schist with plagioclase, quartz, biotite and muscovite.

Symbols

- Contact – dashed where mapped by geology and geophysics, dotted where inferred.
- Fault Zone
- Lineament on high altitude photos.
- 35 / 18 — Strike and dip of banding – plunge indicated if linear elements noted.
- Diamond drill hole – Arrow (if hole inclined) shows traverse and Plan view distance of drill hole.
- Water well drill hole – with rock description and drill hole Number.
- IP Anomaly — grid line
- Magnetic Anomaly – hatchured where strong.
