

Section 16
Water Supply

The only amendment to the water requirements or supply from that approved for the original Oakfield Wind Project to the *Revised Oakfield Wind Project* is that non-potable water for dust abatement during construction, if necessary, may increase from up to 20,000 gallons per day to 30,000 gallons per day. This increase in water withdrawal will not change the naturally occurring water levels of the surrounding lakes from which it will be drawn (reference 06-096 Chapter 587(6)).
