## **SECTION 1. INTRODUCTION AND OBJECTIVES**

This report summarizes the vapor intrusion (VI) investigation methods and results pertaining to the Cumberland Farms, Inc. (CFI) Forest Ave Site, Portland, Maine. Three (3) Areas of Concern (AOCs) were identified as part of the Phase 1 Environmental Assessment and are discussed in the following sections. The objectives of the Phase 2A and 2B investigations for the Forest Ave Site were as follows:

- Evaluate vapor concentration in or next to utility conduits that connect to potential receptors; CFI building and two off-Site apartment buildings.
- Collect soil, groundwater and soil gas samples from Areas of Concern (AOCs) to compare source concentrations in the three media to concentrations outside the source areas; 15 ft and 30 ft away.
- Collect soil gas samples at 2 ft above the water table and 8 ft below ground surface (15 ft separation) at the source areas to evaluate vertical soil gas concentration gradients.
- Collect soil gas samples at a distance of 15ft and 30 ft outside the source areas to evaluate horizontal soil gas concentration gradients.
- Collect soil gas samples in or next to preferential pathways and assess the migration potential for elevated soil gas concentrations to move along those pathways to receptors.
- Collect data during two seasonal events; once during the summer (August) and once during the winter (December) to compare concentrations between sampling events.

## **SECTION 2. SITE BACKGROUND**

The Forest Ave CFI Site is located at 1336 Forest Ave in Portland, Maine and is approximately 0.375 acres in size. The lot is occupied by a single story building, constructed on a concrete slab. Approximately 75% of the building is used for CFI's convenience store and 25% is vacant rental space. Presently there is a two-dispenser fueling pad covered by a canopy located on the east portion of the property next to Forest Ave. Three 8,000 gal gasoline USTs are located in the northern portion of the property. The Site is bound to the north and west by residential property, south by a parking lot owned by the City of Portland, southwest by residential property and east by Forest Ave, beyond which is commercial property. **See Figure 1 Site Location Map and Figure 2 Site Map**, which are located in the back of this report.

The following Recognized Environmental Conditions (RECs) were identified from the previously completed ASTM 1527-05 Phase 1 Environmental Assessment:

- The documented property ownership and property use prior to Cumberland Farms (1964-1973) as a Service Station.
- The documented installation of two-550 gallon USTs on the west side of the building with no documentation of their removal.
- Current use of the property (gasoline station) since 1973.
- Documented petroleum release in 2004, which caused impacts to soil and groundwater at the property.

- The documented historical abutting property ownership and past/current use as a filling station along with reported releases and petroleum vapor impacts (Susan's fish n Chips, across Forest Ave).
- The vapor encroachment screen (VES) resulted in a determination that a vapor encroachment concern (VEC) *Likely Exists*. The determination was based on the Site's historical use and the documented subsurface impacts that potentially intersect subsurface utilities (significant preferential pathway) serving the Site.

The identified RECs have been evaluated with regard to potential source areas for VI at the CFI Site and have resulted in three (3) AOCs, which are described below:

**AOC-1 Area of Existing and Former Dispenser Islands** - In 2004 a petroleum release occurred from the dispenser island piping causing impacts to soil and groundwater. MEDEP estimated up to 1,000 gallons of product could have been released. Free product was discovered in one monitoring well (MW1), located directly south of the pump island. Free product was removed from the well through vacuum extraction. Contamination in the soil was also found on the east side of the dispenser island (MW2 and MW3), but at lower levels than at MW1. Borings and monitoring wells installed on the north and west sides of the dispenser island showed low to non-detect petroleum impacts to soil. Groundwater flow direction in that portion of the Site is believed to be towards the south-southeast based on water elevation data from previous studies. The natural gas service line trends just south of the dispenser-island and MW1 and connects to the building's southeast corner. The gas line and the utilities along Forest Ave. are potential preferential pathways for vapor migration. The sewer main along Forest Ave. is 20 ft bgs and may intersect the water table.

**AOC – 2 Area of Existing and Former USTs** – There have been at least two generations of USTs at the current UST location on Site. In 1987, four 4,000 gal. gasoline USTs were replaced with three 8,000 gal. USTs. There is no documentation on the environmental conditions related to the USTs removal in 1987. Although there is no documented release from AOC-2, soil borings and monitoring wells completed in 2004 as part of the investigation related to the fuel dispenser release (AOC-1), showed elevated petroleum impacts in soil at the water table (20 ft) in MW7. PID readings in the MW7 boring were 1,759 PPM from 13-15 ft and 397 PPM from 25-27 ft. MW7 is located on the north side of the existing and former UST pit. Groundwater elevation data collected during a previous study indicate that the water table at MW7 is lower than the water table at MW8 indicating a possible gradient to the north-northeast. This data contradicts the groundwater elevation data from the monitoring wells around AOC-1, which show groundwater moving to the south-southeast. It is possible that on a local scale, a groundwater divide exists. Groundwater in the northern portion of the Site might move towards the north-northeast while groundwater in the center to southern portions of the Site moves to the south-southeast. Limited data exists around the existing and former UST pit related to the extent of petroleum impacts. As indicated above, MW7 showed evidence of a release in soil samples collected at the water table (20 ft). MW8 did not show evidence of impacts and based on water table elevations, MW8 is hydraulically up gradient from MW7.

**AOC – 3 Area of Former Fuel Oil and Waste Oil USTs** – AOC-3 is located on the west side of the CFI building in a small area of the property between the building and western property line. Records indicate that a fuel oil and waste oil UST were installed in 1964, but there was no documentation found indicating whether or not the two USTs were removed. There is no record of a release from the fuel oil or waste oil USTs. The reported location of the old USTs is close to the CFI building and property line that separates the CFI Site from residential property. Based on the information to date, there are no preferential pathways in the form of utility conduits that would connect the area of the USTs to the CFI building, or to the abutting residence. Ground penetrating radar survey (GPR) conducted in AOC-3 as part of the Phase IIA Investigation indicated no evidence of USTs remaining at that location.

Note: AOC-3 was not investigated as part of the Phase 2A or 2B investigations and is not discussed further in this report, or depicted on the Site Map.

### **Underground Utilities as Preferential Pathways**

The Site and surrounding area are served by public water and sewer provided by the Portland Water District. Figure 2 shows the utility information that is known at this time. Underground utilities at the Site consist of:

- Natural Gas – Natural gas enters the south side of the building and is connected to the main along Forest Ave. The service line crosses the property just south of AOC-1.
- Sewer pipeline – A sewer line easement trends east-west along the north side of the property and crosses through the location of the existing USTs. The sewer easement provides service to the abutting residential properties northwest of the Site. The CFI building's sewer service is connected to the north side of the building and runs northeast between the pump island and USTs discharging to the sewer easement close to Forest Ave. The sewer main is 20 ft deep along Forest Ave, sloping up to approximately 2 ft (top of pipe) on the west side of the property. According to the abutting property owner to the west, during the UST upgrade, the sewer line connecting his property to the sewer main was broken. The pipe was repaired by the tank installers within the UST excavation.
- Water – The water service shut-off for the Site is located on the edge of Forest Ave. No additional information was obtained indicating the location of the water service line through the property.
- UST Vent Pipes – UST vent pipes are located at the western property boundary and are connected to the USTs along the north side of the building.
- Dispenser Electrical Conduits – The electrical conduits from the dispenser island enter the northeast corner of the building, between the USTs and dispenser-island.

The depth to groundwater is approximately 18-20 ft below ground surface (bgs). A previous utility survey indicated that all the manholes and utility lines are above the water table with the exception of one sewer manhole located in the middle of Forest Ave., opposite Morrill Street, which has a bottom elevation that correlates to 21 ft bgs. This sewer manhole and a portion of the sewer pipe and conduit connected to this manhole are likely below the water table. The sewer main that runs beneath Forest Ave. is likely at or below the water table along the front (east) of the property.

The preferential pathways of concern related to the presently known underground utilities include:

1. The sewer line that connects to the CFI building. The mapped location of the sewer line crosses close to the old UST pit where petroleum impacted soil might exist.
2. The sewer line easement that crosses (east-west) in the northern portion of the property is mapped as crossing the former and existing UST pit where documented petroleum impacts exist. This easement is not directly connected to the CFI building, however it is connected to abutting residential property to the west. The sewer easement represents a potential preferential pathway for vapor migration to off-Site receptors – the residents and utility conduits along Forest Ave.
3. The electrical line conduit that connects the dispenser island to the north side of the building is a potential preferential pathway for vapor migration to the CFI building, due to the documented presence of petroleum impacts in the area of the existing dispenser island.
4. The natural gas line that enters the south side of the building is a potential preferential pathway to the CFI building and offsite to Forest Ave. due to possible impacted groundwater in the southeast direction of the dispenser islands. The gas line would likely trend 15-16 ft above a downgradient plume of impacted groundwater, because the water table is 18-20 ft below the ground surface.

### **SECTION 3. SCOPE OF WORK**

The scope of work for the Phase 2A and Phase 2B investigations was outlined in two study plans dated August 16, 2010 and December 6, 2010, respectively. The combined scope of work for Phase 2A and Phase 2B included the following:

- Completion of 11 direct-push borings. Soils were logged and field screened using a PID. Borings were designated B10 – B20.
  - Installation of four (4) monitoring wells (MW10 - MW13). MW1 - MW9 were installed in 2004 during a different investigation.
  - Installation of 21 soil gas implants and 2 soil gas “grab” samples as follows:
    - 17 soil vapor implants were installed using MAI’s Geoprobe drill rig (SG1S/1D – 3S/3D, 4S, 6D, 7S/7D, 9S/9D, 10S/10D, 13D, 14D, and 15).
    - Three (3) soil gas implants were installed into utility conduit backfill using hand installation methods where visual confirmation of the utility line was obtained (SG12, SG13S, and SG14S).
    - One (1) soil gas implant was installed into utility conduit backfill using hand installation methods where visual confirmation of the utility line was not obtained. Implant location was identified by a third party locate service (SG6S).
    - Two (2) sub-floor soil gas “grab” samples were collected from beneath the CFI building floor at the same location, but on different dates using hand installation methods (SG8 – August 2010 and SG8A – December 2010).
  - Collection and laboratory analysis of two (2) soil samples for VPH (MADEP Method VPH 04 1.1); B13 (20-22.5') and B16 (20-22.5').
  - Elevation survey of monitoring wells and depth to groundwater measurements.
  - Collection and laboratory analysis of 13 groundwater samples for VPH (MADEP Method VPH 04 1.1): MW1, MW3, MW6, MW10 on 8/31/10, and MW1, MW3, MW7, MW8, and MW10 – MW13 on 12/21/10.
  - Collection and laboratory analysis of eight (8) groundwater samples for VOCs (EPA Method 8260B chlorinated VOCs only): MW1, MW3, MW7, MW8, MW10 – MW13 on 12/21/10, only. All groundwater VOCs by EPA 8260B were non-detect, therefore not shown in groundwater results, Table 6 in Appendix 1.
  - Collection and laboratory analysis of 28 soil gas samples from the above soil gas sampling points for:
    - chlorinated VOCs by EPA method TO-15,
    - Air petroleum hydrocarbons in air (APH) by Massachusetts DEP’s Air-Phase Petroleum Hydrocarbons (APH) method, Rev1 December 2009, and
    - fixed gases oxygen, carbon dioxide and methane (O<sub>2</sub>, CO<sub>2</sub> and CH<sub>4</sub>)
- Note: 12 soil gas samples were collected in August/September 2010 and 16 samples were collected in December 2010.

## **SECTION 4. METHODOLOGY**

The general methodological approach and specific sampling and testing methodologies are presented in **Tables 1 and 2 in Appendix 1**.

### **4.1 General Methodology**

The Forest Ave Site has two source areas that were addressed as part of the investigation. AOC-1 represents the area of the existing dispenser island and AOC-2 represents the area of the former and existing USTs. The general approach to both AOC's was to collect co-located soil, groundwater, and soil gas samples from as close to the dispenser islands and USTs as possible given the required set-back distances. From there, lateral migration was assessed by stepping out 15 and 30 ft with additional co-located samples for soil, groundwater and soil gas. Vertical soil gas gradients were also assessed, because the depth to groundwater is approximately 20 ft bgs.

Two underground utilities, or preferential pathways of concern were investigated; the sewer line that runs east to west through the UST area, then connecting to the resident located next to the western property line and the sewer service line that enters the north side of the CFI building. Soil, groundwater, and deep and shallow soil gas samples were co-located next to the CFI building where the sewer service line enters.

The sewer line that runs through the UST area was addressed at three sampling points between the USTs and the abutting residential property - west. Three (3) soil gas implants were installed in the sewer line conduit backfill, with visual confirmation of the sewer pipe as assurance that the implants were installed within the utility conduit. Visual confirmation means that hand coring and soil vacuuming was performed at each implant location to the extent that the sewer line pipe became visible. The soil gas implants were placed directly next to the sewer pipe, therefore assuring that the implants were within the utility backfill conduit. Co-located soil (PID only), deep soil gas, and groundwater samples were also collected to compare analytical data sets.

Two sub-slab soil gas samples (SG8 and SG8A) were collected inside the building, where access was allowed by Cumberland Farms.

**Table 1, General Methodology, Appendix 1**, describes the samples collected and the rationale for each sample.

### **4.2 Sample Collection and Testing Methodologies**

The sample collection and testing methodologies are described in **Table 2, Sample Collection and Testing Methodologies, Appendix 1**.

Soil boring logs are in **Appendix 2, Boring Logs and Monitoring Well Construction Details**.

Soil and groundwater samples were submitted to Analytics Environmental Laboratory LLC, via Maine Environmental Laboratory in Yarmouth, Maine, for analysis of VPH. A trip blank accompanied all groundwater samples.

Soil gas samples were submitted to Alpha Analytical, Mansfield, Massachusetts for analysis of fixed gases, chlorinated organic compounds and petroleum hydrocarbons. Field data sheets for soil gas sampling are in **Appendix 3, Soil Gas Field Data Sheets**.

Soil analytical results were compared to Table 5, Tier 2 Risk-Based Soil Remediation Guidelines for Petroleum Target Compounds and Hydrocarbon Fractions, in *Remediation Guidelines for Petroleum Contaminated Sites in Maine*, effective December 1, 2009 (referred to hereafter as OCW Guidelines).

Groundwater analytical results were compared to the following standards and guidelines:

- Maine Centers for Disease Control, Maximum Exposure Guidelines for drinking water, December 5, 2008, (MEGs),
- Massachusetts Contingency Plan Method 1 Groundwater Standards, Table 1, GW-2 Standards (310 CMR 40.0974(2), which apply to groundwater that is considered a potential source of indoor air contamination, and
- Note: MEDEP Draft Groundwater Vapor Intrusion Screening Levels for the Chronic Commercial Scenario are presented in the groundwater results table (Table 6) in Appendix 1, however for this report, MAI has not used the MEDEP Draft Screening Levels for discussion or comparison, as we understand the screening levels are under review at the MEDEP.

Soil gas analytical results were compared to MEDEP's Soil Gas Target concentrations (SGT), which are calculated by applying a 50 times factor to the MEDEP Indoor Air Target (IAT) concentrations in Tables B2 and B6, Indoor Air Targets for Chronic Residential and Commercial Scenario (ug/m<sup>3</sup>) – 1/14/2010 Interim Final for Multi-Contaminant Sites, in *MEDEP Vapor Intrusion Evaluation Guidance, January 13, 2010*.

Complete laboratory reports are in **Appendix 4, Laboratory Reports**. Laboratory data is summarized in **Tables in Appendix 1, Figures and Tables**.

## SECTION 5. RESULTS

### 5.1 Quality Assurance

Samples were collected in a consistent manner that represented the contaminant concentrations in the media sampled. Duplicate soil gas samples were collected to compare the laboratory results of two samples collected from the same location. Field monitoring of O<sub>2</sub>, CO<sub>2</sub>, and methane was performed on soil gas samples to compare to the laboratory fixed gases concentrations of O<sub>2</sub>, CO<sub>2</sub>, and methane. In addition, ambient air O<sub>2</sub> and CO<sub>2</sub> were collected to compare to soil gas O<sub>2</sub> and CO<sub>2</sub> to assist in determining whether or not short-circuiting occurred between the subsurface soil gas and the above ground air during soil gas purging and sampling. The field and laboratory fixed gases data are presented in **Table 3, Fixed Gas Data, Appendix 1.**

Review of the data from the duplicate soil gas samples SG1D-Duplicate and sample SG1D, the concentrations of the petroleum hydrocarbons in the duplicate samples are lower for each parameter tested for both sampling events. For the August 2010 sampling event, the % decrease in concentrations between SG1D and SG1D Duplicate for the petroleum hydrocarbon concentrations ranges from 32% to 41% with an average of 36% lower concentration, which is greater than the +/-20% acceptable surrogate recovery limits in matrix spike data for laboratories. For the December 2010 sampling event, the % decrease in concentrations ranges from 8.9% to 10.5% with an average of 9.7%, which is within the +/-20% acceptable surrogate recovery limits in matrix spike data for laboratories. The duplicate samples were collected after the original SG1D sample, therefore it is possible that the larger differences in concentrations between the duplicate samples and the original samples from SG1D are related to one or more of the following: 1) additional removal of soil gas from the implant decreases the concentrations in the duplicate sample, 2) additional removal of soil gas causes short circuiting during the collection of the duplicate sample, or 3) there are laboratory errors that exceed the +/-20% acceptable surrogate recovery limits in matrix spike data.

Review of the duplicate samples for the TO-15 (VOCs) analysis show only one parameter detected above the reporting limit (Tetrachloroethene [PCE]). For the August 2010 sampling event, the concentration in the duplicate sample (SG1D Duplicate) was 28% lower than SG1D. For the December 2010 sampling event, SG1D was non-detect for PCE, but PCE was reported at a concentration of 14.8 ug/m<sup>3</sup> in SD1D Duplicate. Using the reporting limit (RL) concentration (13.6 ug/m<sup>3</sup>) for SG1D, the percent increase in PCE concentration between the two duplicate samples was 8%.

The average % difference between the original (SG1D) and duplicate (SG1D Duplicate) laboratory samples for O<sub>2</sub> and CO<sub>2</sub> was only 5.5%.

The difference between the ambient O<sub>2</sub> and CO<sub>2</sub> concentrations and the soil gas O<sub>2</sub> and CO<sub>2</sub> concentrations varied across all the sample locations. The soil gas O<sub>2</sub> concentrations were in each case lower than the ambient O<sub>2</sub> concentrations and the CO<sub>2</sub> soil concentration were in each case higher than the ambient CO<sub>2</sub> concentrations. These data are consistent with what would be expected from comparing ambient air and soil gas from petroleum contamination in the subsurface, however, ***no distinguishable pattern between sample locations and depth was evident.***

Methane (CH<sub>4</sub>) was detected in field analyses of soil gas samples at nine (9) locations; SG1S, SG1D, SG2S, SG3S, SG4S, SG6D, SG7S, SG7D, and SG13D, ranging from 1 to 8% of the LEL. CH<sub>4</sub> was not detected by the laboratory in any soil gas sample. The field detections of CH<sub>4</sub> suggests an anomaly in the field CH<sub>4</sub> testing procedure, or a lack of accuracy or calibration inconsistencies with the CH<sub>4</sub> field testing equipment.

## 5.2 Soil Samples

Two source area soil samples were collected and tested for VPH; B13 (20-22.5') and B16 (20-22.5'). Both samples were collected during the August 2010 field work and neither sample revealed petroleum concentrations that exceed DEP remediation guidelines for Outdoor Commercial Worker (OCW) scenario. In addition, no RLs exceeded the remediation guidelines. Soil testing results are included in **Table 4, Soil Analytical Results, Appendix 1**.

## 5.3 Groundwater

Groundwater elevations were measured in 13 monitoring wells (MW1 – MW13) on 12/15/10. The groundwater table is very flat with a practically indistinguishable gradient and flow direction. Depth to groundwater ranges from 17.85 ft bgs at MW1 (Elev 83.56 ft) to a 19.99 ft bgs at MW10 (Elev 82.26 ft). The maximum ground water elevation change is 1.31 ft, however that is skewed by the highest elevation in MW1. Excluding MW1, the maximum difference in groundwater elevations of the other 12 wells is 0.08 ft. Using the groundwater elevation data collected, a slight mound is present around MW1, which indicates radial flow outward from MW1. Because of the very slight changes in groundwater elevations across the Site (hundredths of a foot), ***flow direction across the rest of the Site cannot be determined with acceptable accuracy.*** Monitoring well and groundwater elevation data are presented in **Table 5, Groundwater Elevations, Appendix 1**.

MEDEP Draft Groundwater Vapor Intrusion Screening Levels for the Chronic Commercial Scenario are presented in the groundwater results table (Table 6) in Appendix 1, however for this report, MAI has not used the MEDEP Draft Screening Levels for discussion or comparison, as we understand the screening levels are under review at the MEDEP.

A total of 13 groundwater samples were collected for laboratory testing during the August and December 2010 sampling events. MW1, MW3, MW6, MW7, MW10 were collected in Augusta 2010 and MW1, MW3, MW6 – MW8, and MW10 – MW13 were collected in December 2010. MW11 – MW13 had not been installed until December 2010. The analytical results, along with regulatory guidelines are shown in **Table 6, Groundwater Analytical Results, Appendix 1**.

Of the 13 groundwater samples, three (3) wells had petroleum concentrations that exceeded the Maine Exposure Guidelines (MEGs) for drinking water: MW1 (August and December 2010), MW3 (August 2010, only) and MW7 (August 2010, only). Only one well (MW1 – August 2010, only) showed petroleum concentrations exceeding the MA GW2 standards for groundwater that is considered a potential source of indoor air contamination. MW1 and MW3 are both located inside the known source area (AOC-1) around the existing dispenser islands and MW7 is located next to AOC-2 and the northerly property line. MW6, located 30 ft from MW1 (source area sample) did not indicate any petroleum hydrocarbons that exceeded the MEGs.

For the four (4) wells (MW1, MW3, MW7, MW10) that were sampled in both August and December 2010, ***three of the wells (MW1, MW3, MW7) showed consistent decreases in***

*petroleum concentrations from the August to December 2010 sampling events.* Only MW10 showed an increase. MW10 was non-detect in August 2010, then showed low concentrations of petroleum constituents in the December 2010 event.

#### 5.4 Soil Gas

Twenty eight (28) soil vapor samples (excluding duplicates) were collected during the Phase 2A and Phase 2B field investigations and submitted for laboratory analysis of APH, and a list of chlorinated organic compounds (Targeted VOCs) by EPA Method TO-15. The soil gas analytical results are summarized in **Table 7, Soil Gas Analytical Data, Appendix 1**. The results are compared to MEDEP Soil Gas Target (SGT) concentrations in Table 7.

As shown in Table 7, two (2) locations that were planned for sampling during the December 2010 sampling event were not collected (SG7D and SG9D). There was insufficient air flow during the December 2010 sampling event.

The targeted VOCs by TO-15 analysis showed low level concentrations of PCE in all but seven (7) of the 28 sampled tested. Trichloroethene was also detected in low concentrations in two (2) of the 28 samples. The PCE and trichloroethene concentrations were all well below the SGTs. VOCs were not detected in any of the groundwater samples.

APH compounds were detected in all the soil gas samples, with the exception of SG15, which was a “near slab” sample collected next to the apartment building north of the Site. Of the 28 soil gas sampling locations, ***only two (2) locations (SG1D – December 2010 and SG14S – December 2010) showed concentrations above the Commercial SGT.*** In both cases, APH fractions C5-C8 aliphatics exceeded the SGT; 45,000 ug/m<sup>3</sup> for SG1D and 16,000 ug/m<sup>3</sup> for SG14S. No other APH fractions or compounds exceeded the SGTs. SG1D was installed within the source area (AOC-1) and SG14S was hand-installed in the sewer line conduit backfill next to AOC-2 with visual confirmation of the sewer pipe.

With regard to the Residential SGTs, three soil gas implants near a source area (AOC-2) and with a potential connection to the two residential units to the west and north of the Site showed concentrations exceeding the Residential SGTs. SG14S located in the sewer conduit that connects to the west abutting residence and located next to AOC-2 exceeded the Residential SGT for C5-C9 aliphatics. SG7S located at the property line between the Site and the residential unit north of the Site exceeded the Residential SGT for tetrachloroethene (PCE) and SG7D, the deeper co-located implant to SG7S, exceeded the Residential SGT for C9-C10 aromatics. ***Although residential SGTs were exceeded at the above locations, other soil gas implants closer to the two residential units did not exceed the SGTs, indicating that a complete pathway between the Site and the two residential units abutting to the west and north of the Site does not exist.***

Both SG1D and SG14S has a co-located soil gas implant at a different depth. Review of the APH concentration differences vertically (APH fractions total, only) reveals the following:

- At SG1S/1D the concentration of APH fractions are 87% higher in SG1D compared to the shallow implant, SG1S. These data are consistent with what would be expected, because the groundwater at MW1, which is co-located with SG1S/SG1D has the most

elevated petroleum concentrations across the Site and the deep soil gas sample is closer to that source than the shallow soil gas sample.

- SG14S/14D shows the opposite result, most likely because SG14S is installed in the sewer line conduit that runs through AOC-2, where SG14D is installed 2 ft above the water table next to SG14S. SG14D APH fractions are 99.7% lower than SG14S. The groundwater at MW12, which is co-located to SG14S/SG14D showed low level impacts that do not represent a significant soil gas contaminant source as demonstrated by the low soil gas concentrations in SG14D (44 ug/m<sup>3</sup> APH total). The sewer conduit crossing AOC-2 represents a much more significant source/pathway for soil gas as demonstrated by the high level of APH fractions (16,000 ug/m<sup>3</sup>) in SG14S.

Continuing the review of deep vs. shallow soil gas concentrations, the other co-located deep/shallow points reveal a similar pattern, although at lower concentrations. There are deep/shallow implants associated with utility conduits (SG2S/2D, SG6S/6D, SG13S/13D, and as discussed above, SG14S/14D). There are also deep/shallow implants not associated or near utility conduits (SG1S/1D, SG3S/3D, SG7S/7D, and SG10S/10D).

***For all the soil gas concentrations at the co-located implants where the shallow implant is either directly in a utility bedding conduit or next to a utility bedding conduit, the concentrations in the shallow implants are higher than the deep implants.*** For example:

- SG2S APH fractions 6% higher than SG2D (Only sampled in August 2010)
- SG6S APH fractions 14% higher than SG6D in August 2010 and 79% higher in December 2010
- SG13S APH fractions 57% higher than SG13D (Only sampled in December 2010)
- SG14S APH fractions 99.7% higher than SG14D (Only sampled in December 2010)

The higher percentage differences also correlate with shallow implants placed directly in the utility bedding backfill as determined by visual confirmation of the pipe. For example, SG2S was installed 2 ft away from where the gas line was marked (gas line 2 ft deep) and SG6S was hand augered into the sewer service line backfill based on a third party locate. SG13S and SG14S were installed only after hand excavation/vacuuming visibly revealed the location of the utility pipe.

Where there is no utility conduit associated with the shallow implant, the shallow implant concentrations are lower than the deep implant concentrations. For example:

- SG1S APH fractions 87% lower than SG1D in August 2010 and 99.9% lower in December 2010.
- SG3S APH fractions 87% lower than SG3D (Only sampled in August 2010)
- SG7S APH fractions 91% lower than SG7D (SG7D only sampled in August 2010)
- SG10S APH fractions 48 % lower than SG10D (Only sampled in December 2010)

***These data indicate that vertical attenuation of the soil gas concentrations occurs vertically away from the source, when the source is groundwater.***

Horizontal migration or horizontal concentration gradient can be analyzed from two groups of soil gas implants. One at AOC-1 and one at AOC-2.

#### AOC-2

SG14S, SG13S, and SG12 are all located in the sewer line conduit and each implant was installed after visual confirmation of the pipe was obtained. The concentrations along the conduit show a clear decrease in soil gas concentrations further away from the source area (AOC-2). SG14S, which is closest to the source exceeded SGTs (16,000 ug/m<sup>3</sup> for C5-C8 aliphatics). Thirty (30) feet away at the western property line (SG13S), the C5-C8 aliphatics decrease to 200 ug/m<sup>3</sup>, a 98.7% decrease in 30 ft and below the SGTs. Concentrations further decrease in SG12, located in the sewer utility conduit next to the apartment building, which is approximately 60 ft away from the source area. The total APH (compounds and fractions) was 18.5 ug/m<sup>3</sup>, which is a 99.9% decrease from the source area 60 ft away and a 91% decrease from SG13S, which is 30 ft away. Another way to look at changes in concentration away from the source area is to calculate the concentration gradient using change in concentration divided by the distance between two points. Using this method the concentration gradient between SG14S and SG13S is 526 ug/m<sup>3</sup> concentration drop per ft away from the source area. The concentration gradient from SG13S to SG12 is 6 ug/m<sup>3</sup> concentration drop per ft. ***These data indicate that the drop in concentration occurs rapidly somewhere within the first 30 ft away from the source, then decreasing more slowly at greater distances.***

#### AOC-1

A less clear relationship in horizontal concentration gradients exist at AOC-1, compared to the utility conduit samples from AOC-2. Review of just the deep soil gas samples from the source area (SG1D), then out 15 ft (SG2D) and 30 ft (SG3D), the total APH fractions concentrations drop rapidly in the first 15 ft, from 2,288 ug/m<sup>3</sup> (SG1D) to 420 ug/m<sup>3</sup> (SG2D) in the August 2010 sampling event, which is an 82% decrease in concentration. The concentration gradient is 125 ug/m<sup>3</sup> concentration drop per ft horizontally away from the source area. However, from SG2D to SG3D, the total APH fractions concentration increases slightly from 420 ug/m<sup>3</sup> (SG2D) to 490 ug/m<sup>3</sup> (SG3D). At these lower concentrations and given the many likely variables (utilities in and along Forest Ave and localized groundwater contaminant migration patterns) affecting soil gas movement, the slight increase in concentration from SG2D to SG3D, is not considered significant and is more likely an anomaly.

Two sub-slab samples were collected from beneath the CFI building at the same location, but on different dates. SG8 and SG8A were collected in August and December 2010, respectively. No VOCs (TO-15), or APH compounds or fractions exceeded the SGTs. None of the near slab soil gas samples (SG6S/6D, SG9S, SG10S/10D, SG12, SG15) exceeded the SGTs.

## **SECTION 6. CONCLUSIONS**

### **Soil**

- The results of the VPH analysis on soil samples from B13 (20-22.5') and B16 (20-22.5') did not exceed the Outdoor Commercial Worker remediation guidelines (*Remediation Guidelines for Petroleum Contaminated Sites in Maine, December 2009*), according to laboratory analytical data.

### **Groundwater**

- Groundwater elevations were measured in 13 monitoring wells (MW1 – MW13) on 12/15/10. The groundwater table is very flat with a practically indistinguishable gradient and flow direction. Using the groundwater elevation data collected, a slight mound is present around MW1, which indicates radial flow outward from MW1. Because of the very slight changes in groundwater elevations across the rest of the Site (hundredths of a foot), flow direction across the rest of the Site cannot be determined from the groundwater elevation data collected with acceptable accuracy.
- Of the 13 groundwater samples, three (3) wells had petroleum concentrations that exceeded the Maine Exposure Guidelines (MEGs) for drinking water: MW1 (August and December 2010), MW3 (August 2010, only) and MW7 (August 2010, only). Only one well (MW1 – August 2010, only) showed petroleum concentrations exceeding the MA GW2 standards for groundwater that is considered a potential source of indoor air contamination.
- No VOCs by EPA Method 8260 were reported for the groundwater samples.
- The highest concentrations of VPH fractions and compounds in groundwater were in MW1 located in AOC-1 source area. Concentrations in MW1 decreased significantly from the August 2010 to December 2010 sampling events; 81% decrease in total VPH fractions. VPH compounds and fractions in two other wells that were sampled twice also decreased in concentrations from the August to December 2010 sampling event - MW3 and MW6. These wells are close to MW1. MW10 was sampled in August and December, but the VPH concentrations changed from non-detect in August 2010 to low level VPH compounds and fractions in December 2010, which is the opposite of the other three well sampled on the two separate dates. MW10 is located next to AOC-2 and therefore affected by a different source and possibly a different groundwater flow pattern.
- In the wells located near receptors (MW10, MW11, and MW13), no VPH compounds or fractions exceeded the MEGs, or MA GW2 standards.

### **Soil Gas**

#### Comparison of Soil Gas Concentrations to SGTs

- Chlorinated volatile organics, PCE and trichloroethene were detected in laboratory analyses of soil gas samples, but the concentrations were all below the SGTs.
- APH compounds were detected in all the soil gas samples, with the exception of SG15, which was a “near slab” sample collected next to the apartment building north of the Site. Of the 28 soil gas sampling locations, only two (2) locations (SG1D – December 2010 and SG14S – December 2010) showed concentrations above the SGTs. In both cases,

APH fractions C5-C8 aliphatics exceeded the SGT; 45,000 ug/m<sup>3</sup> for SG1D and 16,000 ug/m<sup>3</sup> for SG14S.

- No targeted VOCs (TO-15), or APH compounds or fractions exceeded the SGTs in the two sub-slab samples (SG8 and SG8A), or the near slab soil gas samples (SG6S/6D, SG9S, SG10S/10D, SG12, SG15).

#### Conclusions Related to Fix Gases – Field and Laboratory

- The soil gas O<sub>2</sub> concentrations in each sample were lower than the ambient O<sub>2</sub> concentrations and the CO<sub>2</sub> soil gas concentrations in each sample were higher than the ambient CO<sub>2</sub> concentrations. These data are consistent with what would be expected from comparing ambient air and soil gas from petroleum contamination in the subsurface. The fix gas data indicates that short circuiting, or seal breaching during purging and sample collection was not evident from the data collected.
- Methane (CH<sub>4</sub>) was detected in field analyses of soil gas samples at nine (9) locations; SG1S, SG1D, SG2S, SG3S, SG4S, SG6D, SG7S, SG7D, and SG13D, ranging from 1 to 8% of the LEL. CH<sub>4</sub> was not detected by the laboratory in any soil gas sample. The field detections CH<sub>4</sub> suggests an anomaly in the field CH<sub>4</sub> testing procedure, or a lack of accuracy or calibration inconsistencies with the CH<sub>4</sub> field testing equipment.

#### Horizontal Gradients

- A clear decrease in APH concentrations is evident from the data along the sewer pipeline that passes through AOC-2. The three implants installed in the sewer pipe backfill showed a significant decrease in APH concentrations from SG14S (next to source area) to SG13S (30 ft away from source area). The concentrations dropped from 16,000 ug/m<sup>3</sup> for C5-C8 aliphatics in SG14S to 200 ug/m<sup>3</sup> in SG13S, which is a 98.7% decrease. Concentrations further decrease in SG12, located in the sewer utility conduit next to the apartment building, which is approximately 60 ft away from the source area. The total APH (compound and fractions) in SG12 was 18.5 ug/m<sup>3</sup>, which is a 99.9% decrease from the source area 60 ft away and a 91% decrease from SG13S, which is 30 ft away. The concentration gradient along the sewer conduit from source to a point 30 ft away is 526 ug/m<sup>3</sup> concentration decrease per foot. The concentration gradient from 30 – 60 ft is much less; 6 ug/m<sup>3</sup> concentration decrease per foot.
- The deep soil gas samples from the AOC-1 source area also indicate a rapid decrease in soil gas concentrations a short distance form the source area. Total APH fractions concentration in SG1D drop from 2,288 ug/m<sup>3</sup> to 420 ug/m<sup>3</sup> in SD2D, which is 15 ft away from SG1D. This equals an 82% decrease in concentration and a concentration gradient of 125 ug/m<sup>3</sup> concentration decrease per foot.

#### Vertical Gradients

- All the soil gas concentrations at the co-located implants where the shallow implant is either directly in the utility bedding conduit, or next to it and the deep implant targets the underlying water table (~ 20 ft bgs), the APH concentrations in the shallow implants are higher than the deep implants. This is most strongly indicated from the data from the co-located implants along the sewer line that passes through AOC-2 and connects to the west abutting residence, indicating that granular backfill typically

- associated with a utility conduit that passes through a source area can act as a preferential pathway for elevated soil gas concentrations.
- Where there is no utility conduit associated with the shallow implant, the shallow implant concentrations are lower than the deep implant concentrations. These data indicate that without the presence of a preferential pathway, the soil gas concentrations decrease vertically upward from the source, which in this case is impacted groundwater at a depth of approximately 20 ft.

#### Sub-Slab and Near Slab

- The sub-slab soil gas concentrations collected from SG8 and SG8A showed low to moderate concentrations of a number of APH compounds and fractions, but none of the concentrations exceeds the SGTs. The data indicate that the location of SG8/8A is not close enough to impacted soil or groundwater to cause significantly elevated sub-slab concentrations, as is indicative from the rapid decrease in soil gas concentrations from a source area, out 15 – 30 ft away from the source area.
- SG6S (near slab and in the sewer service conduit backfill) does not show elevated APH above SGTs, indicating that although the sewer service line is connected to the building, elevated APH concentrations would not likely enter the building via that preferential pathway. It is possible that higher APH concentrations exist within the sewer service conduit backfill further away from the building, east of AOC-2, however if that is the case, the concentrations rapidly decrease in the direction of the building.
- Near slab implant SG12 was installed into the sewer line conduit backfill that connects to AOC-2. SG12 showed trace to low levels of APH compounds and fractions, even though it is located in the same preferential pathway as SG14S, which had APH fractions exceeding the SGTs. As discussed in the horizontal migration section, the data show that APH concentrations decrease rapidly away from the source area, therefore it is unlikely under current conditions that elevated APH concentrations would reach the residence abutting west property line via the sewer conduit from AOC-2.
- Near slab to the apartment building north of the Site, SG9S, SG10S, SG10D, and SG15 all show trace to low levels of APH compounds and fractions, indicating that the apartment building is not located close enough to a significant source area (soil or groundwater) such that elevated soil gas concentrations have reached the apartment building from the Site.

**Table 1**  
**General Methodology**  
**CFI – Forest Ave**  
**Portland, Maine**

<b>Category</b>	<b>Sample ID/Media</b>	<b>Rationale</b>
<i>Source Area (Dispenser Area)</i>		
	SG-1S/Soil Gas	Assess contaminant concentrations in soil gas in known source area (MW-1) adjacent to dispensers and to investigate the vertical gradient between SG1S (11') and SG1D (16').
	SG-1D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table in known source area (MW-1) adjacent to dispensers and to investigate the vertical gradient between SG1S and SG1D.
	SG-4S/Soil Gas	Assess contaminant concentrations in soil gas in known source area (MW-3) adjacent to dispensers.
	MW-1/Groundwater	Existing MW, sampled to assess contaminant concentrations in source area groundwater, and compare to co-located soil gas samples SG1S/1D.
	MW-2/Groundwater	Existing MW, sampled to assess contaminant concentrations in source area groundwater, near soil gas sample SG4S and adjacent to dispensers.
	MW-3/Groundwater	Existing MW, sampled to assess contaminant concentrations in source area groundwater, and compare to co-located soil gas sample SG4S.
	B-13/Soil	Assess contaminant concentrations in soil within source area, and provide soil data for comparison to adjacent soil gas (SG-4S) and groundwater (MW-3) samples.
<i>Migration (Dispenser Area)</i>		
	SG-2S/Soil Gas	Assess contaminant concentrations in soil gas approximately 15' downgradient of known source area (MW-1) and source area samples SG-1S/1D and to investigate the vertical gradient between SG2S (11') and SG2D (16').
	SG-2D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table and approximately 15' downgradient of known source area (MW-1) and source area sample SG-1S/1D and to investigate the vertical gradient SG2S and SG2D.
	SG-3S/Soil Gas	Assess contaminant concentrations in soil gas approximately 30' downgradient of known source area (MW-1) and source area sample SG-1S/1D, and to investigate the vertical gradient between SG3S (11') and SG3D (16').
	SG-3D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table and approximately 30' downgradient of known source area (MW-1) and source area sample SG-1S/1D, and to investigate the vertical gradient between SG3S and SG3D.
	MW-6/Groundwater	Existing MW, sampled to assess contaminant concentrations in groundwater downgradient of and approximately 30' from source area and compare results to the co-located soil gas samples SG3S/3D.
<i>Migration (Current/Historic UST Area)</i>		
	SG-6D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table (New MW10) adjacent to suspected source area (USTs), the CFI building, and SG-6S located in sewer line trench (preferential pathway). Also compare data to groundwater data collected from the adjacent New MW10.

**Table 1**  
**General Methodology**  
**CFI – Forest Ave**  
**Portland, Maine**

<b>Category</b>	<b>Sample ID/Media</b>	<b>Rationale</b>
	SG-7S/Soil Gas	Assess contaminant concentrations in soil gas adjacent to suspected source area (USTs) and along property line, and to investigate the vertical gradient between SG7S (11') and SG7D (16'). Also compare data to groundwater data collected from co-located MW7.
	SG-7D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table adjacent to suspected source area (USTs) and along property line, and to investigate the vertical gradient between SG7S and SG7D. Also compare data to groundwater data collected from co-located MW7.
	SG-9S/Soil Gas	Assess contaminant concentrations in soil gas adjacent to suspected source area (USTs) and along property line, and to investigate the vertical gradient SG9S (11.5') and SG9D (16.5'). Also compare data to groundwater data collected from the co-located MW13.
	SG-9D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table adjacent to suspected source area (USTs) along property line and to investigate the vertical attenuation of vapor concentrations (5' below shallow vapor point) between SG9S and SG9D. Also compare data to groundwater data collected from the adjacent New MW13.
	SG-10S/Soil Gas	Assess contaminant concentrations in soil gas adjacent to suspected source area (USTs) and along property line, and to investigate the vertical gradient between SG10S (11.5') and SG10D (16.5').
	SG-10D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table adjacent to suspected source area (USTs) and along property line, and to investigate the vertical gradient between SG10S and SG10D.
	SG-13D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table 15' from sample location (SG14S/14D, MW12) installed adjacent to the suspected source area (USTs) and beneath sewer line trench. Also, investigate the vertical gradient between SG13S (2.2', Installed on sewer line) and SG13D (17.5') and compare soil gas data to groundwater data collected from the co-located MW11.
	SG-14D/Soil Gas	Assess contaminant concentrations in soil gas 2' above water table adjacent to suspected source area (USTs) beneath sewer line trench and to investigate the vertical gradient between SG14S (2.75' Installed on sewer line) and SG14D (16.5'). Also compare soil gas data to groundwater data collected from the co-located MW12.
	B16/Soil	Assess contaminant concentrations in soil adjacent to the current/historic UST area, and provide soil data for comparison to co-located soil gas (SG-7S/7D) and groundwater (MW-7) samples.
	MW-7/Groundwater	MW, to provide groundwater contaminant concentration data from an area adjacent to current/former USTs, along property line, and co-located to SG7S/7D and soil sample B-16.
	MW-8/Groundwater	MW, to provide groundwater contaminant concentration data adjacent to current/former UST area.
	MW-10/Groundwater	MW, to provide groundwater contaminant concentration data adjacent to current/former UST area and adjacent to soil gas samples SG6S/6D and CFI building.

**Table 1**  
**General Methodology**  
**CFI – Forest Ave**  
**Portland, Maine**

<b>Category</b>	<b>Sample ID/Media</b>	<b>Rationale</b>
	MW-11/Groundwater	MW, to provide groundwater contaminant concentration data adjacent to current/former USTs and adjacent to soil gas samples SG13S/13D located along sewer line bisecting the property.
	MW-12/Groundwater	MW, to provide groundwater contaminant concentration data adjacent to current/former USTs and adjacent to soil gas samples SG14S/14D located along sewer line bisecting the property.
	MW-13/Groundwater	MW, to provide groundwater contaminant concentration data adjacent to current/former USTs and adjacent to soil gas samples SG9S/9D located along the property boundary.
<i>Preferential Pathways</i>		
	SG-14S/Soil Gas 2.75 feet	Assess soil gas concentration in backfill of sewer line. Vapor point is in contact with pipe based on visual confirmation of pipe. Sewer line bisects property and connects to abutting residence.
	SG-13S/Soil Gas 2.2 feet	Assess soil gas concentration in backfill of sewer line. Vapor point is in contact with pipe based on visual confirmation of pipe. Sewer line bisects property and connects to abutting residence.
	SG-6S/Soil Gas 3.3 feet	Assess soil gas concentration in backfill of sewer line. Vapor point is installed based on third party pipe locating. Visual confirmation of pipe not performed. Sewer line connects to the CFI building.
<i>Receptors</i>		
	SG-12/Soil Gas 2 feet	Assess soil gas concentration adjacent to slab of west side resident and in sewer line service conduit. Visual confirmation of sewer pipe obtained
	SG-8A/Soil Gas 1.5 feet	Assess sub-slab gas concentration inside CFI building.
	SG-8/Soil Gas 1.5 feet	Assess sub-slab gas concentration inside CFI building.
	SG-15/Soil Gas 8 feet	Assess near slab soil gas concentration next to north-side resident..

Notes: Groundwater sample intakes were 1 foot below water table surface.

**Table 6**  
**Groundwater Analysis - VPH**  
**CFI-Forest Ave Portland, ME**

Notes: The December 21, 2010 sampling event included analysis for 8260 - chlorinated compounds only at each sampling location. No compounds were detected at any of the sampling locations and as a result the parameters have not been included on the Table. Laboratory Reporting Limits (RLs) exceeded the MA GW2 Standard for 4 parameters in MW1 only. Units in ug/l - Vinyl Chloride (RL=5, GW2=2), Carbon Tetrachloride (RL=5, GW2=2), Bromomethane (RL=10, GW2=7), and 1,2 Dichloropropane (RL=5, GW2=3).

VPH = Volatile Petroleum Hydrocarbons, MA DEP Method

-- = No standard or guideline for this compound

ND = Not detected above the laboratory reporting limit (Reporting Limit - RL)

J = Compound detected below calibrated range, concentration estimated

## BORING DESIGNATION B10 SG1S/SG1D

Project Number: 1047-2-2

Drilling Rig: Geoprobe 6620DT

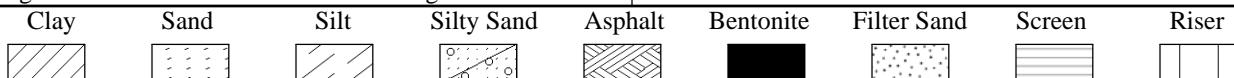

Geologist: Paul Prescott

Sampling Method: Dual Tube Sampler

Date Drilled: 8/26/10

Total Depth of Borehole: 20 Feet

Drilling Method: Direct Push Boring

Sample ID	Lithology	Description	Depth (ft)	PID Reading (ppm)	Notes	Well Completion
S1		Asphalt Brown SAND & GRAVEL		3		
		Light Brown SAND, few Gravel		2		
S2		Brown SAND	5	2		
		Brown SAND, with lenses (.3') of Silt and Clay		2		
S3		Brown/Grey SILT w/ few Sand	10	2	SG-1S installed at 11', sand from 10'-11', bentonite to ground surface	
		Light Brown SAND		2		
S4		Light Brown SAND	15	2	SG-1D installed at 16', sand from 15'-16', bentonite to ground surface - Petrol Odor	
		Light Brown SAND		294		
		Bottom of Boing 20' (no refusal)	20			
			25

## MONITORING WELL WATER SAMPLING DATA RECORD

Project: CFI Forest  
Date: 8/30/10

Well I.D.: MW-1  
Sampler(s): Prescott  
Sampler Signature: [Signature]

### WELL DATA

Water Depth [from Top of Casing]: 18.80  
Well Diameter: 1" PVC  
Integrity: OK

### PURGE

Method: Geotech Peristaltic Pump w/ Flow Through Cell

Tubing Intake Depth: 20'

Start Time: 820

Flow Rate: 80 ml/m.n

End Time(Sample Start): 940

### Final Readings

DO: 1.6 mg/l

Turbidity: 147 lots of fires

### Purge Water Observations (Color, Odor, Sheen):

Comments: Well purged below intake - let well recover then sampled

**Report Number: 67624**  
**Revision: Rev. 0**

**Re: MAI 380-10**

Enclosed are the results of the analyses on your sample(s). Samples were received on 30 August 2010 and analyzed for the tests listed. Samples were received in acceptable condition, with the exceptions noted below or on the chain of custody. These results pertain to samples as received by the laboratory and for the analytical tests requested on the chain of custody. The results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. Please see individual reports for specific methodologies and references.

<u>Lab Number</u>	<u>Sample Date</u>	<u>Station Location</u>	<u>Analysis</u>	<u>Comments</u>
67624-1	08/26/10	B13 (20-22.5')	Volatile Petroleum Hydrocarbons	
67624-2	08/26/10	B16 (20-22.5')	Electronic Data Deliverable	
	08/26/10	B16 (20-22.5')	Volatile Petroleum Hydrocarbons	

**Sample Receipt Exceptions:** None

Analytics Environmental Laboratory is certified by the states of New Hampshire, Maine, Massachusetts, Connecticut, Rhode Island, Virginia, Maryland, and is accredited by the Department of Defense (DOD) ELAP program. A list of actual certified parameters is available upon request.

If you have any questions on these results, please do not hesitate to contact us.

**Re: MAI 382-10**

Enclosed are the results of the analyses on your sample(s). Samples were received on 02 September 2010 and analyzed for the tests listed. Samples were received in acceptable condition, with the exceptions noted below or on the chain of custody. These results pertain to samples as received by the laboratory and for the analytical tests requested on the chain of custody. The results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. Please see individual reports for specific methodologies and references.

<u>Lab Number</u>	<u>Sample Date</u>	<u>Station Location</u>	<u>Analysis</u>	<u>Comments</u>
67658-1	08/30/10	MW-1	Volatile Petroleum Hydrocarbons	
67658-2	08/30/10	MW-3	Volatile Petroleum Hydrocarbons	
67658-3	08/30/10	MW-10	Volatile Petroleum Hydrocarbons	
67658-4	08/30/10	MW-6	Volatile Petroleum Hydrocarbons	
67658-5	08/30/10	MW-7	Volatile Petroleum Hydrocarbons	
67658-6	08/30/10	Trip Blank	Electronic Data Deliverable	
	08/30/10	Trip Blank	Volatile Petroleum Hydrocarbons	

**Sample Receipt Exceptions:** None

Analytics Environmental Laboratory is certified by the states of New Hampshire, Maine, Massachusetts, Connecticut, Rhode Island, Virginia, Maryland, and is accredited by the Department of Defense (DOD) ELAP program. A list of actual certified parameters is available upon request.

If you have any questions on these results, please do not hesitate to contact us.

### **MADEP MCP Response Action Analytical Report Certification**

**This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.**

<b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	YES
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	YES
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

<b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

**For any questions answered "No", please refer to the case narrative section on the following page(s).**

Please note that sample matrix information is located in the Sample Results section of this report.

**Project Name:** CFI- FOREST DEP VI  
**Project Number:** 1047

**Lab Number:** L1013606  
**Report Date:** 09/13/10

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

---

#### MCP Related Narratives

Canisters were released from the laboratory on August 23, 2010.

The canister certification data is provided as an addendum.

The internal standards were within method criteria.

#### Petroleum Hydrocarbons in Air

All significant concentrations of non-petroleum VOCs detected in the TO-15 analysis were subtracted from the corresponding hydrocarbon ranges.

#### Fixed Gas

L1013606-01 through -12: Prior to sample analysis, the canisters were pressurized with UHP Hydrogen in order to facilitate the transfer of sample to the Gas Chromatograph. The addition of Hydrogen resulted in a

## GLOSSARY

### **Acronyms**

- EPA - Environmental Protection Agency.
- LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD - Matrix Spike Sample Duplicate: Refer to MS.
- NA - Not Applicable.
- NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI - Not Ignitable.
- RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

### **Terms**

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

**Report Format:** Data Usability Report

**Project Name:** CFI- FOREST DEP VI  
**Project Number:** 1047

**Lab Number:** L1013606  
**Report Date:** 09/13/10

*Data Qualifiers*

- RE** - Analytical results are from sample re-extraction.  
**J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).  
**ND** - Not detected at the reporting limit (RL) for the sample.

**Project Name:** CFI- FOREST DEP VI  
**Project Number:** 1047

**Lab Number:** L1013606  
**Report Date:** 09/13/10

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Certificate/Approval Program Summary**

Last revised July 19, 2010 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held. For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

**Connecticut Department of Public Health Certificate/Lab ID: PH-0141.**

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable), Total Cyanide. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Organic Carbon, Total Cyanide, Corrosivity, TCLP 1311. **New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3010, 3020A, 3015, 6020, SM2320B, EPA 200.8, SM2540C, 2540D, 2540G, EPA 120.1, SM2510B, EPA 180.1, 245.1, 1631E, SW-846 9040B, 6020, 9010B, 9014 Organic Parameters: EPA 608, 625, SW-846 3510C, 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082 8260B, 8270C)

*Solid & Chemical Materials* (Inorganic Parameters: SW-846 6020, 9010B, 9014, 1311, 1312, 3050B, 3051, 3060A, 7196A, 7470A, 7471A, 9045C, 9060. Organic Parameters: SW-846 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082, 8260B, 8270C, 3570, 8015B.)

*Atmospheric Organic Parameters* (EPA TO-15)

*Biological Tissue* (Inorganic Parameters: SW-846 6020 Organic Parameters: SW-846 8270C, 3510C, 3570, 3610B, 3630C, 3640A)

**New York Department of Health** Certificate/Lab ID: 11627. **NELAP Accredited.**

*Non-Potable Water* (Inorganic Parameters: EPA 310.1, SM2320B, EPA 365.2, 160.1, EPA 160.2, SM2540D, EPA 200.8, 6020, 1631E, 245.1, 335.2, 9014, 150.1, 9040B, 120.1, SM2510B, EPA 376.2, 180.1, 9010B. Organic Parameters: EPA 624, 8260B, 8270C, 608, 8081A, 625, 8082, 3510C, 3511, 5030B.)

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 9040B, 9045C, SW-846 Ch7 Sec 7.3, EPA 6020, 7196A, 7471A, 7474, 9014, 9040B, 9045C, 9010B. Organic Parameters: EPA 8260B, 8270C, 8081A, DRO 8015B, 8082, 1311, 3050B, 3580, 3050B, 3035, 3570, 3051, 5035, 5030B.)

*Air & Emissions* (EPA TO-15.)

**Rhode Island Department of Health** Certificate/Lab ID: LAO00299. **NELAP Accredited via LA-DEQ.**

Refer to MA-DEP Certificate for Non-Potable Water.

Refer to LA-DEQ Certificate for Non-Potable Water.

**Texas Commission of Environmental Quality** Certificate/Lab ID: T104704419-08-TX. **NELAP Accredited.**

*Solid & Chemical Materials* (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 7196, 9014, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8260, 8081, 8082.)

*Air* (Organic Parameters: EPA TO-15)

**U.S. Army Corps of Engineers**

**Department of Defense** Certificate/Lab ID: L2217.01.

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 1311, 1312, 3051, 6020, 747A, 7474, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580, 3570, 3540C, 5035, 8260B, 8270C, 8270 Alk-PAH, 8082, 8081A, 8015 (SHC), 8015 (DRO).

*Air & Emissions* (EPA TO-15.)

#### **Analytes Not Accredited by NELAP**

Certification is not available by NELAP for the following analytes: **8270C**: Biphenyl.

### MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

<b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	YES
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	YES
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

<b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

**For any questions answered "No", please refer to the case narrative section on the following page(s).**

Please note that sample matrix information is located in the Sample Results section of this report.

**Project Name:** CFI- FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1013911  
**Report Date:** 09/15/10

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

---

#### MCP Related Narratives

Canisters were released from the laboratory on August 23, 2010.

The canister certification data is provided as an addendum.

The internal standards were within method criteria.

#### Fixed Gas

L1013911-01: Prior to sample analysis, the canister was pressurized with UHP Hydrogen in order to facilitate the transfer of sample to the Gas Chromatograph. The addition of Hydrogen resulted in a dilution of the sample. The reporting limits have been elevated accordingly.

#### Petroleum Hydrocarbons in Air

All MCP required questions were answered with affirmative responses; therefore, there are no relevant data

## GLOSSARY

### **Acronyms**

- EPA - Environmental Protection Agency.
- LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD - Matrix Spike Sample Duplicate: Refer to MS.
- NA - Not Applicable.
- NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI - Not Ignitable.
- RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

### **Terms**

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

**Report Format:** Data Usability Report

**Project Name:** CFI- FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1013911  
**Report Date:** 09/15/10

*Data Qualifiers*

- RE** - Analytical results are from sample re-extraction.  
**J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).  
**ND** - Not detected at the reporting limit (RL) for the sample.

**Project Name:** CFI- FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1013911  
**Report Date:** 09/15/10

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Certificate/Approval Program Summary**

Last revised July 19, 2010 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held. For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

**Connecticut Department of Public Health Certificate/Lab ID: PH-0141.**

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable), Total Cyanide. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Organic Carbon, Total Cyanide, Corrosivity, TCLP 1311. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Volatile Organics, Acid Extractables, Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

**Florida Department of Health Certificate/Lab ID: E87814. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: SM2320B, EPA 120.1, SM2510B, EPA 245.1, EPA 150.1, EPA 160.2, SM2540D, EPA 335.2, SM2540G, EPA 180.1. Organic Parameters: EPA 625, 608.)

Solid & Chemical Materials (Inorganic Parameters: 6020, 7470, 7471, 9045, 9014. Organic Parameters: EPA 8260, 8270, 8082, 8081.)

Air & Emissions (EPA TO-15.)

**Louisiana Department of Environmental Quality Certificate/Lab ID: 03090. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: EPA 120.1, 150.1, 160.2, 180.1, 200.8, 245.1, 310.1, 335.2, 608, 625, 1631, 3010, 3015, 3020, 6020, 9010, 9014, 9040, SM2320B, 2510B, 2540D, 2540G, 4500CN-E, 4500H-B, Organic Parameters: EPA 3510, 3580, 3630, 3640, 3660, 3665, 5030, 8015 (mod), 3570, 8081, 8082, 8260, 8270, )

Solid & Chemical Materials (Inorganic Parameters: 6020, 7196, 7470, 7471, 7474, 9010, 9014, 9040, 9045, 9060. Organic Parameters: EPA 8015 (mod), EPA 3570, 1311, 3050, 3051, 3060, 3580, 3630, 3640, 3660, 3665, 5035, 8081, 8082, 8260, 8270.)

Biological Tissue (Inorganic Parameters: EPA 6020. Organic Parameters: EPA 3570, 3510, 3610, 3630, 3640, 8270.)

**Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA030.**

Non-Potable Water (Inorganic Parameters: SM4500H+B. Organic Parameters: EPA 624.)

**New Hampshire Department of Environmental Services Certificate/Lab ID: 2206. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: EPA 200.8, 245.1, 1631E, 120.1, 150.1, 180.1, 310.1, 335.2, 160.2, SM2540D, 2540G, 4500CN-E, 4500H+B, 2320B, 2510B. Organic Parameters: EPA 625, 608.)

**New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3010, 3020A, 3015, 6020, SM2320B, EPA 200.8, SM2540C, 2540D, 2540G, EPA 120.1, SM2510B, EPA 180.1, 245.1, 1631E, SW-846 9040B, 6020, 9010B, 9014 Organic Parameters: EPA 608, 625, SW-846 3510C, 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082 8260B, 8270C)

*Solid & Chemical Materials* (Inorganic Parameters: SW-846 6020, 9010B, 9014, 1311, 1312, 3050B, 3051, 3060A, 7196A, 7470A, 7471A, 9045C, 9060. Organic Parameters: SW-846 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082, 8260B, 8270C, 3570, 8015B.)

*Atmospheric Organic Parameters* (EPA TO-15)

*Biological Tissue* (Inorganic Parameters: SW-846 6020 Organic Parameters: SW-846 8270C, 3510C, 3570, 3610B, 3630C, 3640A)

**New York Department of Health** Certificate/Lab ID: 11627. **NELAP Accredited.**

*Non-Potable Water* (Inorganic Parameters: EPA 310.1, SM2320B, EPA 365.2, 160.1, EPA 160.2, SM2540D, EPA 200.8, 6020, 1631E, 245.1, 335.2, 9014, 150.1, 9040B, 120.1, SM2510B, EPA 376.2, 180.1, 9010B. Organic Parameters: EPA 624, 8260B, 8270C, 608, 8081A, 625, 8082, 3510C, 3511, 5030B.)

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 9040B, 9045C, SW-846 Ch7 Sec 7.3, EPA 6020, 7196A, 7471A, 7474, 9014, 9040B, 9045C, 9010B. Organic Parameters: EPA 8260B, 8270C, 8081A, DRO 8015B, 8082, 1311, 3050B, 3580, 3050B, 3035, 3570, 3051, 5035, 5030B.)

*Air & Emissions* (EPA TO-15.)

**Rhode Island Department of Health** Certificate/Lab ID: LAO00299. **NELAP Accredited via LA-DEQ.**

Refer to MA-DEP Certificate for Non-Potable Water.

Refer to LA-DEQ Certificate for Non-Potable Water.

**Texas Commission of Environmental Quality** Certificate/Lab ID: T104704419-08-TX. **NELAP Accredited.**

*Solid & Chemical Materials* (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 7196, 9014, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8260, 8081, 8082.)

*Air* (Organic Parameters: EPA TO-15)

**U.S. Army Corps of Engineers**

**Department of Defense** Certificate/Lab ID: L2217.01.

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 1311, 1312, 3051, 6020, 747A, 7474, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580, 3570, 3540C, 5035, 8260B, 8270C, 8270 Alk-PAH, 8082, 8081A, 8015 (SHC), 8015 (DRO).

*Air & Emissions* (EPA TO-15.)

#### **Analytes Not Accredited by NELAP**

Certification is not available by NELAP for the following analytes: **8270C**: Biphenyl.

**Revision: Rev. 0**

**Re: MAI 400-10**

Enclosed are the results of the analyses on your sample(s). Samples were received on 28 December 2010 and analyzed for the tests listed. Samples were received in acceptable condition, with the exceptions noted below or on the chain of custody. These results pertain to samples as received by the laboratory and for the analytical tests requested on the chain of custody. The results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. Please see individual reports for specific methodologies and references.

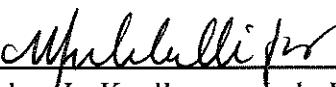

**Sample Analysis:** The attached pages detail the Client Sample IDs, Lab Sample IDs, and Analyses requested

**Sample Receipt Exceptions:** None

Analytics Environmental Laboratory is certified by the states of New Hampshire, Maine, Massachusetts, Connecticut, Rhode Island, Virginia, Maryland, and is accredited by the Department of Defense (DOD) ELAP program. A list of actual certified parameters is available upon request.

If you have any questions on these results, please do not hesitate to contact us.

### MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

<b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	YES
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	YES
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

<b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

**For any questions answered "No", please refer to the case narrative section on the following page(s).**

Please note that sample matrix information is located in the Sample Results section of this report.

**Project Name:** CFI - FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1020380  
**Report Date:** 01/07/11

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

---

#### MCP Related Narratives

Canisters were released from the laboratory on December 15, 2010.

The canister certification data is provided as an addendum.

#### Volatile Organics in Air

L1020380-02, -10, -11, -13 through -17 have elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG449337-8 LCS, associated with samples L1020380-10 and -11, recovery for Tetrachloroethene (134%) is outside the 70%-130% acceptance limit. The LCS was within overall method allowances, therefore the analysis proceeded.

**Project Name:** CFI - FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1020380  
**Report Date:** 01/07/11

#### Case Narrative (continued)

The WG449914-3 LCS, associated with samples L1020380-13 through -17, recovery for Tetrachloroethene (134%) is outside the 70%-130% acceptance limit. The LCS was within overall method allowances, therefore the analysis proceeded.

#### Fixed Gas

L1020380-01 through -17: Prior to sample analysis, the canisters were pressurized with UHP Hydrogen in order to facilitate the transfer of sample to the Gas Chromatograph. The addition of Hydrogen resulted in a dilution of the sample. The reporting limits have been elevated accordingly.

#### Petroleum Hydrocarbons in Air

L1020380-02, and -13 through -17 has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG449336-5 Laboratory Duplicate RPD, performed on L1020380-05, is above the acceptance criteria for C5-C8 Aliphatics (83%); however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

### Quality Control Information

Sample Type:	200 ml/minute Composite
Sample Container Type:	Canister - 2.7 Liter
Sampling Flow Controller:	Mechanical
Sampling Zone:	Unknown
Sampling Flow Meter RPD of pre & post-sampling calibration check:	<=20%
Were all QA/QC procedures REQUIRED by the method followed?	Yes
Were all performance/acceptance standards for the required procedures achieved?	Yes
Were significant modifications made to the method as specified in Sect 11.1.2?	No

Parameter	Result	Qualifier	Units	RL	MDL	Dilution Factor
<b>Petroleum Hydrocarbons in Air - Mansfield Lab</b>						
1,3-Butadiene	ND		ug/m3	2.0	--	1
Methyl tert butyl ether	ND		ug/m3	2.0	--	1
Benzene	ND		ug/m3	2.0	--	1
Toluene	ND		ug/m3	2.0	--	1
C5-C8 Aliphatics, Adjusted	12		ug/m3	12	--	1
Ethylbenzene	ND		ug/m3	2.0	--	1
p/m-Xylene	ND		ug/m3	4.0	--	1
o-Xylene	ND		ug/m3	2.0	--	1
Naphthalene	ND		ug/m3	2.0	--	1
C9-C12 Aliphatics, Adjusted	ND		ug/m3	14	--	1
C9-C10 Aromatics Total	ND		ug/m3	10	--	1

Internal Standard	% Recovery	Qualifier	Acceptance Criteria
1,4-Difluorobenzene	80		50-200
Bromochloromethane	83		50-200
Chlorobenzene-d5	88		50-200

**Project Name:** CFI - FOREST AVE

**Report Date:** 01/07/11

## GLOSSARY

### **Acronyms**

- EPA - Environmental Protection Agency.
- LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD - Matrix Spike Sample Duplicate: Refer to MS.
- NA - Not Applicable.
- NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI - Not Ignitable.
- RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

### **Terms**

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

**Report Format:** Data Usability Report

**Project Name:** CFI - FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1020380  
**Report Date:** 01/07/11

*Data Qualifiers*

- RE** - Analytical results are from sample re-extraction.  
**J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).  
**ND** - Not detected at the reporting limit (RL) for the sample.

**Project Name:** CFI - FOREST AVE  
**Project Number:** 1047-2

**Lab Number:** L1020380  
**Report Date:** 01/07/11

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Certificate/Approval Program Summary**

Last revised July 19, 2010 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held. For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

**Connecticut Department of Public Health Certificate/Lab ID: PH-0141.**

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable), Total Cyanide. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Organic Carbon, Total Cyanide, Corrosivity, TCLP 1311. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Volatile Organics, Acid Extractables, Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

**Florida Department of Health Certificate/Lab ID: E87814. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: SM2320B, EPA 120.1, SM2510B, EPA 245.1, EPA 150.1, EPA 160.2, SM2540D, EPA 335.2, SM2540G, EPA 180.1. Organic Parameters: EPA 625, 608.)

Solid & Chemical Materials (Inorganic Parameters: 6020, 7470, 7471, 9045, 9014. Organic Parameters: EPA 8260, 8270, 8082, 8081.)

Air & Emissions (EPA TO-15.)

**Louisiana Department of Environmental Quality Certificate/Lab ID: 03090. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: EPA 120.1, 150.1, 160.2, 180.1, 200.8, 245.1, 310.1, 335.2, 608, 625, 1631, 3010, 3015, 3020, 6020, 9010, 9014, 9040, SM2320B, 2510B, 2540D, 2540G, 4500CN-E, 4500H-B, Organic Parameters: EPA 3510, 3580, 3630, 3640, 3660, 3665, 5030, 8015 (mod), 3570, 8081, 8082, 8260, 8270, )

Solid & Chemical Materials (Inorganic Parameters: 6020, 7196, 7470, 7471, 7474, 9010, 9014, 9040, 9045, 9060. Organic Parameters: EPA 8015 (mod), EPA 3570, 1311, 3050, 3051, 3060, 3580, 3630, 3640, 3660, 3665, 5035, 8081, 8082, 8260, 8270.)

Biological Tissue (Inorganic Parameters: EPA 6020. Organic Parameters: EPA 3570, 3510, 3610, 3630, 3640, 8270.)

**Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA030.**

Non-Potable Water (Inorganic Parameters: SM4500H+B. Organic Parameters: EPA 624.)

**New Hampshire Department of Environmental Services Certificate/Lab ID: 2206. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: EPA 200.8, 245.1, 1631E, 120.1, 150.1, 180.1, 310.1, 335.2, 160.2, SM2540D, 2540G, 4500CN-E, 4500H+B, 2320B, 2510B. Organic Parameters: EPA 625, 608.)

**New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. **NELAP Accredited.****

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3010, 3020A, 3015, 6020, SM2320B, EPA 200.8, SM2540C, 2540D, 2540G, EPA 120.1, SM2510B, EPA 180.1, 245.1, 1631E, SW-846 9040B, 6020, 9010B, 9014 Organic Parameters: EPA 608, 625, SW-846 3510C, 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082 8260B, 8270C)

*Solid & Chemical Materials* (Inorganic Parameters: SW-846 6020, 9010B, 9014, 1311, 1312, 3050B, 3051, 3060A, 7196A, 7470A, 7471A, 9045C, 9060. Organic Parameters: SW-846 3580A, 5030B, 3035L, 5035H, 3630C, 3640A, 3660B, 3665A, 8081A, 8082, 8260B, 8270C, 3570, 8015B.)

*Atmospheric Organic Parameters* (EPA TO-15)

*Biological Tissue* (Inorganic Parameters: SW-846 6020 Organic Parameters: SW-846 8270C, 3510C, 3570, 3610B, 3630C, 3640A)

**New York Department of Health** Certificate/Lab ID: 11627. **NELAP Accredited.**

*Non-Potable Water* (Inorganic Parameters: EPA 310.1, SM2320B, EPA 365.2, 160.1, EPA 160.2, SM2540D, EPA 200.8, 6020, 1631E, 245.1, 335.2, 9014, 150.1, 9040B, 120.1, SM2510B, EPA 376.2, 180.1, 9010B. Organic Parameters: EPA 624, 8260B, 8270C, 608, 8081A, 625, 8082, 3510C, 3511, 5030B.)

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 9040B, 9045C, SW-846 Ch7 Sec 7.3, EPA 6020, 7196A, 7471A, 7474, 9014, 9040B, 9045C, 9010B. Organic Parameters: EPA 8260B, 8270C, 8081A, DRO 8015B, 8082, 1311, 3050B, 3580, 3050B, 3035, 3570, 3051, 5035, 5030B.)

*Air & Emissions* (EPA TO-15.)

**Rhode Island Department of Health** Certificate/Lab ID: LAO00299. **NELAP Accredited via LA-DEQ.**

Refer to MA-DEP Certificate for Non-Potable Water.

Refer to LA-DEQ Certificate for Non-Potable Water.

**Texas Commission of Environmental Quality** Certificate/Lab ID: T104704419-08-TX. **NELAP Accredited.**

*Solid & Chemical Materials* (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 7196, 9014, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8260, 8081, 8082.)

*Air* (Organic Parameters: EPA TO-15)

**U.S. Army Corps of Engineers**

**Department of Defense** Certificate/Lab ID: L2217.01.

*Solid & Hazardous Waste* (Inorganic Parameters: EPA 1311, 1312, 3051, 6020, 747A, 7474, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580, 3570, 3540C, 5035, 8260B, 8270C, 8270 Alk-PAH, 8082, 8081A, 8015 (SHC), 8015 (DRO).

*Air & Emissions* (EPA TO-15.)

#### **Analytes Not Accredited by NELAP**

Certification is not available by NELAP for the following analytes: **8270C**: Biphenyl.

**ALPHA CHAIN OF CUSTODY**
