

Memorandum

To: Lou Pizzuti, Environmental Specialist - Division of Technical Services
From: Victoria Eleftheriou, P.E., Environmental Engineering Services Manager - Division of Technical Services
Date: April 28, 2016
Subject: Application for a Solid Waste Processing Facility
Municipal Review Committee, Inc. and Fiberight, LLC
Technical Services Log Numbers 19140.2 & 6569
MEDEP Project Number S-022458-WK-A-N

CES Inc. (CES), on behalf of the Municipal Review Committee, Inc. and Fiberight LLC, have prepared additional information¹ regarding the proposed solid waste processing facility in Hampden, Maine. The additional information was provided, in part, based on my February 3, 2016 memorandum to you and our March 23, 2016 meeting with CES. The purpose of the March 2016 meeting was to identify items where further information was needed in order to make a license determination, to identify items that will become license conditions if a license is granted, and to identify items that were adequately addressed as part of the additional information submittal. A meeting summary was prepared and sent to CES via electronic mail on March 24, 2016. CES prepared a March 30, 2016 Letter with attachments in response to the meeting and corresponding meeting summary. For ease of reference, Table 1 provides a list of outstanding items that will need to be submitted at some point in the future and could be made a condition of a license.

Table 1

Category	Item
Utilities	Finalized Agreement with City of Bangor Wastewater Treatment Plant
	Finalized Agreement with Bangor Natural Gas
	Verification of natural gas pipeline upgrades
Operations Manual	Detailed inspection and maintenance checklist
	Updated process description that matches process flow diagram
	Odor neutralization product specifications and provisions for its use
	Detailed tipping floor management plan
Drawings	Construction-ready drawings and record drawings
Technical Ability	Operator-specific personnel qualifications
Financial Ability	Finalized financial documents
NRPA	Forest management plan
Wastewater	Final design for proposed wastewater tanks. Design should consider the separation of process wastewater from septic system wastewater.

¹ MDEP Requested Clarification and Additional Information Response, Solid Waste Processing and Recycling Facility, Hampden, Maine, Municipal Review Committee, Inc. and Fiberight LLC, prepared by CES, Inc., dated March 2016.

Additionally, we briefly discussed the need to have provisions in place for the ongoing evaluation of the facility and process after permitting and during the period from initial start-up to full-scale operations. Process modifications are likely to occur during this period. It is our understanding that CES will be outlining an evaluation approach for our review and comment. The approach will need to include a system of benchmarks including estimated timeframe and provisions for documenting system modifications.

Please call if you have any questions.
