

Progress Report for the Cell Building Dismantling – February 19, 2004

A substantial amount of material has been removed from the building during the first third of the cell dismantling process. Where possible, metal equipment and piping has been decontaminated and sent for recycling. For the period between May 19, 2003 and February 19, 2004 the following are total weights for various types of material shipped from the site:

Recyclable Metals (steel, copper, aluminum, and brass) – 360,073 pounds

Hazardous Materials -- 291,268 pounds

Special Waste -- 19,340 pounds
