

RELEASE NOTES SW 05-09
August 21, 2007

Reportable Events:

DS-EIS-EOAS 01-00-0239 Losing Anchor

DS-EIS-EOAS 01-00-0240 Date Modified Column (Data Table)

Reportable Events:

DS-EIS-EOAS 01-00-0239 Losing Anchor

Request: This is a follow-up to the fix that was DS-EIS-EOAS 01-00-0209 in SW 05-07 when user were clicking on the go button for Reportable Events in My In Box of My Events. The problem now is that once they are in the Reportable Event and click on the Assessment List they again lose the Anchor to the Client although the list that shows is the list of assessment for that Reportable Event for that client in EIS Test. In addition the assessment is attaching itself to other clients both through the tickler reportable event and through the menu reportable event.

Fix: This issue was resolved after webexing with the user to see what was happening at the data base level.

DS-EIS-EOAS 01-00-0240 Date Modified Column (Data Table)

Request: When using toad to check on a reportable event issue Wendy noted the following. In the Dept_Event Table the modified by people_id is not being populated within the Data Base, but the date modified is there?

Fix: Modified by Peo_id is now being populated within the Data base.
