

PATIENT REPORTS BY REQUESTER COMMUNITY

REPORT DESCRIPTION

Registration and Usage Statistics

Many Healthy Maine Partnerships (HMPs) have chosen to promote registration among health care providers and use of the PMP as a health care tool. OSA has created a tracking tool to assist HMP staff members in tracking registration and usage in their service areas. For baseline data for your HMP local service area, please view the "Patient Reports by Requester Community, First Quarter 2009 " report (PDF).

A few words of guidance for interpreting this report

This report is provided to indicate the level of use in the given HMP service area. It is not intended to be used for comparisons between HMP service areas. The intent of this report is to give HMP's a tool for tracking their own progress over time. HMP's vary widely by size, demographics, and number of health care professionals. Only some HMP's have chosen the optional objectives related to PMP.

Definitions -

- Registered Requesters: the total number of health care professionals registered as data requesters in the given HMP service area
- Dispenser: pharmacist data requesters
- Prescriber: Dentist, Medical Doctor, Nurse Practitioner, Nurse Midwife, Osteopathic Doctor, Physician Assistant, and Podiatrist data requesters
- Active Requesters: the number of requesters in each category who actually requested patient history reports during the time period specified at the top of the report
- # of Reports: the count of reports requested by the active users in the given category during the specified time period
- Rx Count: the number of prescriptions that appeared on the reports in the previous column
- Other-ME: for requesters who are not in towns covered by HMP service areas
- Other-Non-ME: for requesters who live outside of Maine
