

Common Paths of Hurricanes

Hurricane, typhoon, and cyclone are all names for the same type of storm. In the Atlantic and Northeast Pacific Oceans, these storms are called hurricanes. In the Northwest Pacific Ocean, these storms are known as typhoons. Cyclone is the name used in the Indian and South Pacific Oceans. All these types of storms are tracked from where they form to where they end. Hurricanes, typhoons, and cyclones all form over tropical and subtropical waters.

How Prepared Are We?
