

# 3RD PELLETIER BROOK LAKE

T16 R9, Aroostook Co.  
U.S.G.S. Pelletier Brook Lakes, Me (7 1/2')

## Fishes

Brook trout  
Minnows  
Redbelly dace

Blacknose dace  
Creek chub  
Brook stickleback

## Physical Characteristics

Area - 83 acres  
Average depth - 12 feet  
Maximum depth - 26 feet

Temperatures:  
Surface - 67<sup>0</sup>F  
25 feet - 47<sup>0</sup>F

Principal fishery: Brook trout

Water quality characteristics of Third Pelletier Brook Lake are considered very good for brook trout. The deeper waters are cold with ample dissolved oxygen in late summer. During warm summer months, spring inflow is crucial to providing sufficient cold water to sustain the trout population.

The trout fishery is maintained entirely by natural spawning within the lake and its three small inlet brooks. Conservative fishing regulations have been implemented to maintain and enhance the sport fishery.

Two-wheel drive access to the pond is via improved private gravel roads maintained by industrial landowners for forest management purposes. An unimproved boat launch leads from the gravel road.
