

# ANDERSON POND

T 10 SD, Hancock Co.  
U.S.G.S. Tunk Lake, Me. (71/2')

## Fishes

Brook Trout

Pumpkinseed Sunfish  
Banded Killifish

Minnows:

Creek Chub

## Physical Characteristics

Area – 16 acres

Temperatures

Surface – 73 °F

Maximum depth – 22 feet

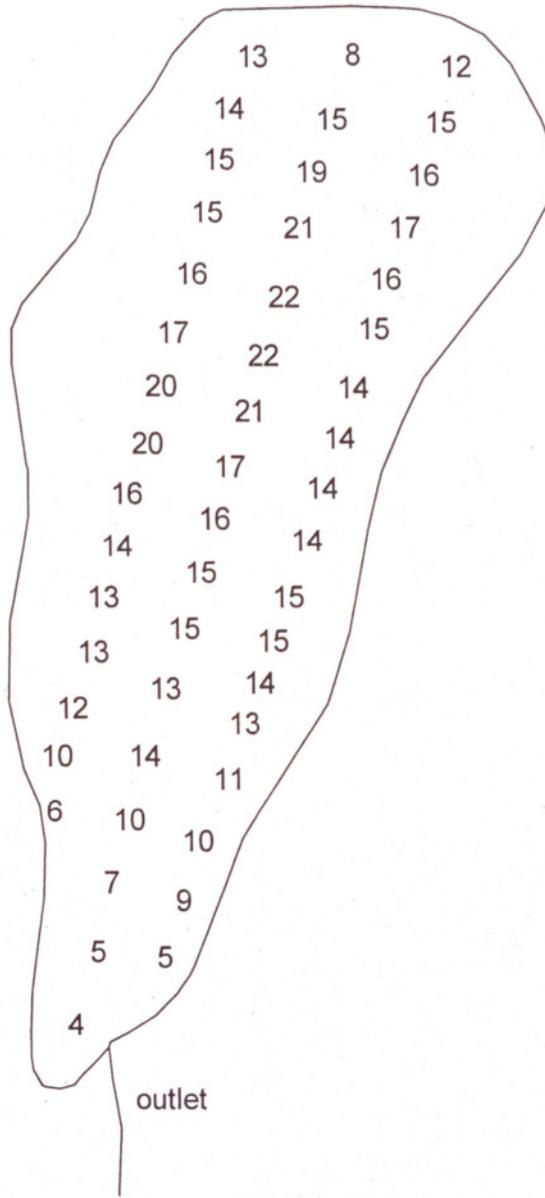

21 feet - 71 °F

Principal Fishery: Brook Trout, baitfish

Anderson Pond is a remote and picturesque water nestled in the middle of the hardwood hills and ledges of the Tunk Mountain region. The pond shares its shore with one small log cabin and foot trails to the north and south shores are the only access to this water. Anglers wanting to try their luck at this pond should travel 3.6 miles on the "Hole in the Wall Road" off Route 182, to a walking trail located at the end of the road. From here it is 20 minute walk the north end of the pond.

The Pond's clear and homothermous water harbors the occasional brook trout that migrates in from the outlet. The pond's warm water temperatures in the summer make it difficult for brook trout to survive to older ages. Experimental stockings of brook trout maybe tried in the future to create "put & take" fishing in the winter and spring when water temperatures are cold.

Surveyed – September, 1998  
Maine Department of Inland Fisheries and Wildlife  
Funded in part by the Federal Aid in Restoration Act under Federal Project F-28-P
