

DEER LAKE  
T34 MD, Hancock Co.  
U.S.G.S. Lead Mountain, Me.

Fishes

Yellow perch  
Chain pickerel  
Hornpout (bullhead)  
Alewife  
Eel  
White sucker

Minnows  
Fallfish (chub)  
Banded killifish  
Pumpkinseed sunfish

Physical Characteristics

Area - 38 acres

Temperatures

Surface - 72°F.

20 feet - 55°F.

Maximum depth - 21 feet

Principal Fishery: Yellow perch, pickerel, bullhead

Deer Lake should be managed for existing populations of warm-water game fish. Pickerel, perch, and hornpout occupy the small volume of cold water in such large numbers that trout would have little chance for survival.

No stocking is recommended.

Surveyed - August, 1955
