Chain pickerel	
White sucker	

Physical Characteristics

Area - 896 acres	Temperatures
	Surface - 76° F.
Maximum depth - 9 feet	9 feet - 75° F.

Gassabias Lake is a warm, weedy lake supporting dense populations of warmwater game fish. You can get to Gassabias via a gravel road that runs between the "Airline" (Route 9) in Washington County and Route 16 in Penobscot County. For specific directions, inquire locally. You can drive to the lake and launch a boat fairly easily at the landing near the outlet.

Fish management for Gassabias should be strictly for the established populations of warmwater game fishes, which are reproducing plentifully. Occasionally, during cool seasons, you may catch a trout that has moved into the pond from Gassabias Stream or from a tributary, but trout stocking is not recommended.
