

MORANCY POND
T7 SD, and Sullivan Twp., Hancock Co.
U. S. G. S. Tunk Lake, Me.

Fishes

Brook trout (squaretail)
Chain pickerel

White sucker
Minnows

Physical Characteristics

Area - 64 acres

Maximum depth - 14 feet

Temperatures

Surface - 73° F.
14 feet - 57° F.

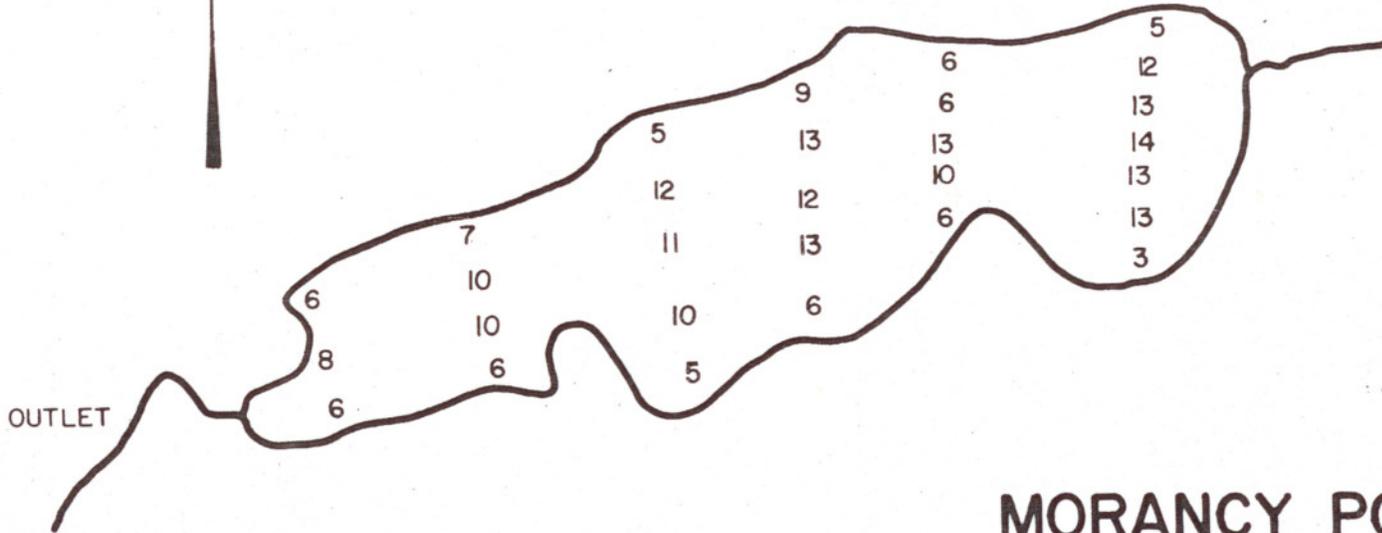

Morancy Pond is a small, boggy pond that drains into Flanders Bay in East Sullivan. You can get there by taking the Morancy Road at East Sullivan. You will need a jeep to get to the pond itself, and there is no boat landing. When water levels are high, you can put a boat or canoe in the outlet and work your way up into the pond.

Morancy Pond has a small volume of water that is sufficiently cold and well-oxygenated for brook trout during the critical summer period. We recommend management for trout, but suggest that no stocking be scheduled at the present time. Both the inlet and the outlet, particularly the outlet, produce brook trout. Enough trout will move into the pond from these streams at high water levels to provide a continuous small trout fishery. These streams should be kept free from obstruction of all types.

We believe that the pickerel in Morancy Pond will curtail trout production, but chemical reclamation to remove them is not feasible in this rather remote, boggy, and marginal trout pond.

Surveyed - August, 1959
