

## **Section 16**

### **Water Supply**

## Section 16. Water Supply

### 16.1 State Standards

Pursuant to the State's Site Law, applicants must demonstrate how water will be supplied for the development.

### 16.2 Water Supply Assessment

During construction, water will be needed for dust control and for drinking. Bottled drinking water will be made available for the support of construction personnel. Dust abatement water will be drawn from offsite non-potable water sources, such as area lakes and ponds, and spread by tanker truck. These water sources will not include brooks, streams, or groundwater sources.

Once the Project is operational, it will not require water supply for the turbines or electrical infrastructure.
