

Section 22

Odors

Section 22. Odors

22.1 State Standards

Pursuant to the State's Site Law, applicants must:

Identify the nature and potential sources of odors from the development, if the development will create any significant odors. Provide an estimate of areas affected and methods of control.

22.2 Odors Assessment

There will be limited odors generated during the construction phase of the Project. Short-term odors may be realized by exhaust from standard forestry/construction equipment and vehicle traffic.

There are no odors anticipated from operations of the Project, although there may be short-lived odors due to specific maintenance that will be primarily contained on the Project property.
