

Section 23

Water Vapor

Section 23. Water Vapor

23.1 State Standards

Pursuant to the State's Site Law, applicants must:

Provide a narrative identifying any potentially large scale water vapor emission from the development, such as that resulting from a processing plant or power generating facility, which may cause a change in local climate. Identify all sources and amounts of such emissions associated with the development, and all abutting areas impacted by the water vapor emissions.

23.2 Water Vapor Assessment

The proposed Project will not produce water vapor as a result of construction or operation of wind turbines, met tower, electrical collector lines, or associated facilities.
