

Bay of Naples (Brandy Pond)
Naples Twp., Cumberland Co.
U.S.G.S. Naples, Me. (7 1/2')

Fishes

Landlocked salmon	Chain pickerel
Brook trout	Minnows
Rainbow smelt	White sucker
Smallmouth bass	Hornpout (bullhead)
Largemouth bass	Cusk
White perch	Pumpkinseed sunfish
Yellow perch	American eel

Physical Characteristics

Area - 762 acres	Temperatures
	Surface - 72°F
Maximum depth - 44 feet	44 feet - 62°F

Principal fisheries: Largemouth bass, smallmouth bass, white perch

Anyone familiar with Brandy Pond may wonder why two species of coldwater fish appear in the list of fishes. Brandy Pond, due to its location, acts as a thoroughfare between Long Lake and Sebago Lake and provides an avenue for all fish movement between these two larger lakes. The list of fishes thus includes all fish that frequent this water even though they may not be resident year-round.

Large numbers of white perch are present in Brandy Pond. Due to their abundance, they are generally small in size and not attractive to many anglers. They also compete with most other species for both food and space which tends to limit the potential of other species, particularly salmon, trout, and smelt.

Smallmouth and largemouth bass provide the most significant fisheries. The small area of cold water and the competition from white perch preclude management of any coldwater fish in Brandy Pond.

Public and commercial boat ramps on Sebago Lake and Long Lake provide access to Brandy Pond.
