

Exhibit A

T&D SPECIFIC PROVISIONS FOR BUSINESS INTERACTIONS

Between

**Versant Power – Maine Public District
(MPD)**

and

(SOP to insert their name here)

**Standard Offer Provider for the 2025
Small, Medium and Large Classes**

Standard Rate Structures for Consolidated Utility Billing:

Versant Power – Maine Public District’s (“Versant Power MPD” or “MPD”) existing Standard Rate Structures include Flat, Blocked, Time-of-Use, Seasonal, and fixed monthly charges. Billing determinants available include KWH, KW, and KVAR. Standard specifications for field sizes and decimal places for rates and rate descriptions shall be the same as for MPD’s charges.

Standard Offer Rate Classes:

Standard Offer Rate Classes for MPD’s customers are as follows:

Residential/Small Non-Residential: Includes all customers defined as residential by MPD’s Terms and Conditions (“T&Cs”), and non-residential customers that take service under a core customer class that does not include a demand charge.

Medium Non-Residential: Includes all non-residential customers that take service under a core customer class that includes a demand charge and in which a customer’s maximum demand does not exceed 499 kW.

Large Non-Residential: Includes all non-residential customers that are not small non-residential or medium non-residential customers.

At any point in time, a customer’s Standard Offer Rate Class will be determined according to MPD’s rate class in which the customer is taking service.

Net Energy Billing:

Net Energy Billing is available to certain customers in accordance with Chapter 313. This provision is applicable only to customers for whom Net Energy Billing is implemented as kWh reduction to the customer’s billed usage. For each of these customers, the usage amount transferred to the Standard Offer provider (“Provider”) will be the customer’s net usage, as that net usage is defined by the applicable precepts, and any generation in excess of a customer’s usage produced by these such customer’s Net Energy Billing eligible facilities will be recorded and reported as a credit through a revenue adjustment transaction. The net will then be reflected in the customer’s account. These steps should then provide the necessary information for the Load Settlement process.

Large Power Billing:

Due to special contract provisions or rate structures, MPD may have customer accounts that are not billed using MPD’s main billing system. For purposes of this contract, and Chapter 322 provisions, all of these customer accounts are considered Nonstandard Rate Structures. The billing programs for these customers will be initialized with logic for the applicable Standard Offer Rate structure. The enrollment of a Large Power Billing customer on the Provider’s rate shall be treated as a Nonstandard Rate Structure change if the Provider’s rate components are different than the applicable Standard Offer Rate components, because individual programming is required.

One type of special contract for a customer with multiple geographic locations totalizes the usage from the separately metered locations under one billing account. The “totalized account” is considered one customer available for enrollment by one Provider. The totalized account usage data will be used for Settlement. Enrollments received on any of the individual locations that are included in the totalized account will be rejected.

Off-Cycle Terminations:

A Competitive Electricity Provider or customer may request an off-cycle termination of an enrolled customer as of a desired date, specifying either pro-rating usage or using an actual meter reading. In either case, the customer will be transferred to Standard Offer as of the effective date of the termination. If an actual meter reading is required, MPD will schedule the reading as soon as is practical, usually within four business days. When an actual meter reading for an off-cycle drop is requested for a customer with KW demand, the KW demand billing determinants will be measured separately for each partial period of the normal billing cycle.

Payment to Provider:

Providers will be paid for all energy sold to Standard Offer customers based upon their bid price and percentage of load provided to the applicable Standard Offer Rate Class, less an allowance for uncollectible accounts. The allowance for uncollectible accounts is withheld from the total energy payment due to the Provider. The allowance for the term of this Agreement is:

Large Non-Residential Class:	0.00%
Medium Non-Residential Class	1.25%
Residential/Small Non-Residential Class	1.65%

Actual meter readings or estimated readings will be the basis for monthly payments to the Provider.

Standard Offer Provider (SOP) Billing Information Transaction Process:

MPD will provide the Provider’s customer usage data for the entire Provider group by rate class distinction for each billing day via EDI in accordance with the applicable Precepts. The processing schedule for transmitting data through EDI will be posted on MPD’s Supplier Website page (<https://www.versantpower.com/suppliers-and-partners/new-suppliers/>).

Standard Bill Format for Consolidated Utility Billing:

The Standard Bill Format for Consolidated Utility Billing will be in compliance with the applicable Precepts.

Payment Transfer Method:

MPD will transfer payments to the Provider in accordance with the applicable Precept. Payments will be transferred via ACH to the bank account designated by the Provider in Exhibit B.

Load Obligation & Settlement Calculations:

MPD shall determine the Supplier's hourly loads and report such to the Independent System Administrator ("ISA") in accordance with the ISA's Market Rules and Procedures and the MPUC Chapter 321 Rule, "Load Obligation and Settlement Calculations for Competitive Providers of Electricity". MPD is the "Assigned Meter Reader" with ISA for the Provider's load asset account. Customer load assignment per Provider will be in accordance with ISA Rules.

1. Per MPUC Chapter 321, section 4(A) (2), MPD will develop Load Profiles for three customer groups: Residential, Small Non-Residential, and Medium Non-Residential. The Small Non-Residential group consists of customers with maximum monthly billing demands generally less than 50 kW. The Medium Non-Residential group consists of customers with monthly maximum billing demands between 50 kW and 499 kW. MPD has also developed a "Deemed" load profile for unmetered customers like lighting customers per section 4(A)(3) of the MPUC's Chapter 321.
2. MPD will use telemetered interval data adjusted for line losses for all interval metered customers with maximum monthly loads of 500 KW or greater. (Interval meters installed for survey purposes are considered temporary and are not available for use in individual billing or settlement calculations). All MPD customers whose maximum monthly demand equals or exceeds 500 KW will be telemetered.
3. Each customer profile will normally contain 8760 hourly load data values corresponding to every hour of every day of the year. Profiles will represent an average per-customer load at the point of retail delivery before losses. These profiles may be further summarized into typical monthly weekday and weekend day load shapes per agreement.
4. Daily Settlement Reports: By 1:00 p.m. (or the time specified by the ISA) of the second business day following the trading period, MPD will report the hourly load responsibility of the Provider to the ISA in conformance with the ISA requirements, and to the Provider in the same format via electronic mail, if requested.
5. Monthly Settlement Reports: Consistent with the timing requirements, the daily or monthly load responsibility for each Provider will be re-estimated using the most recent monthly KWH billing information. The methodology for calculating the Provider load responsibility will be identical to the daily method except the daily estimated energy use of profiled customers will reflect the billing KWH for that month. The monthly energy differences will be reported to the ISA in accordance with their requirements. The monthly settlement data will be made available to the Provider in the same format no later than 2 days after being reported to the ISA.
6. Losses: Versant Power – MPD's latest approved line-loss study was filed with the MPUC on 3/23/2023 in Docket 2023-00074 and is posted on Versant Power - MPD's Supplier web site. When updates are available, Versant Power - MPD will post these updates to the Supplier web site.

MPD Services and Fees for Providers:

MPD will charge for Billing Services and other applicable fees, as appropriate, as are listed in Section 19 of MPD's T&Cs (see Appendix D of this Request for Proposals).
